

Towards a Multi-Style Service-Oriented Architecture for Earth Observations

ENVIROFI

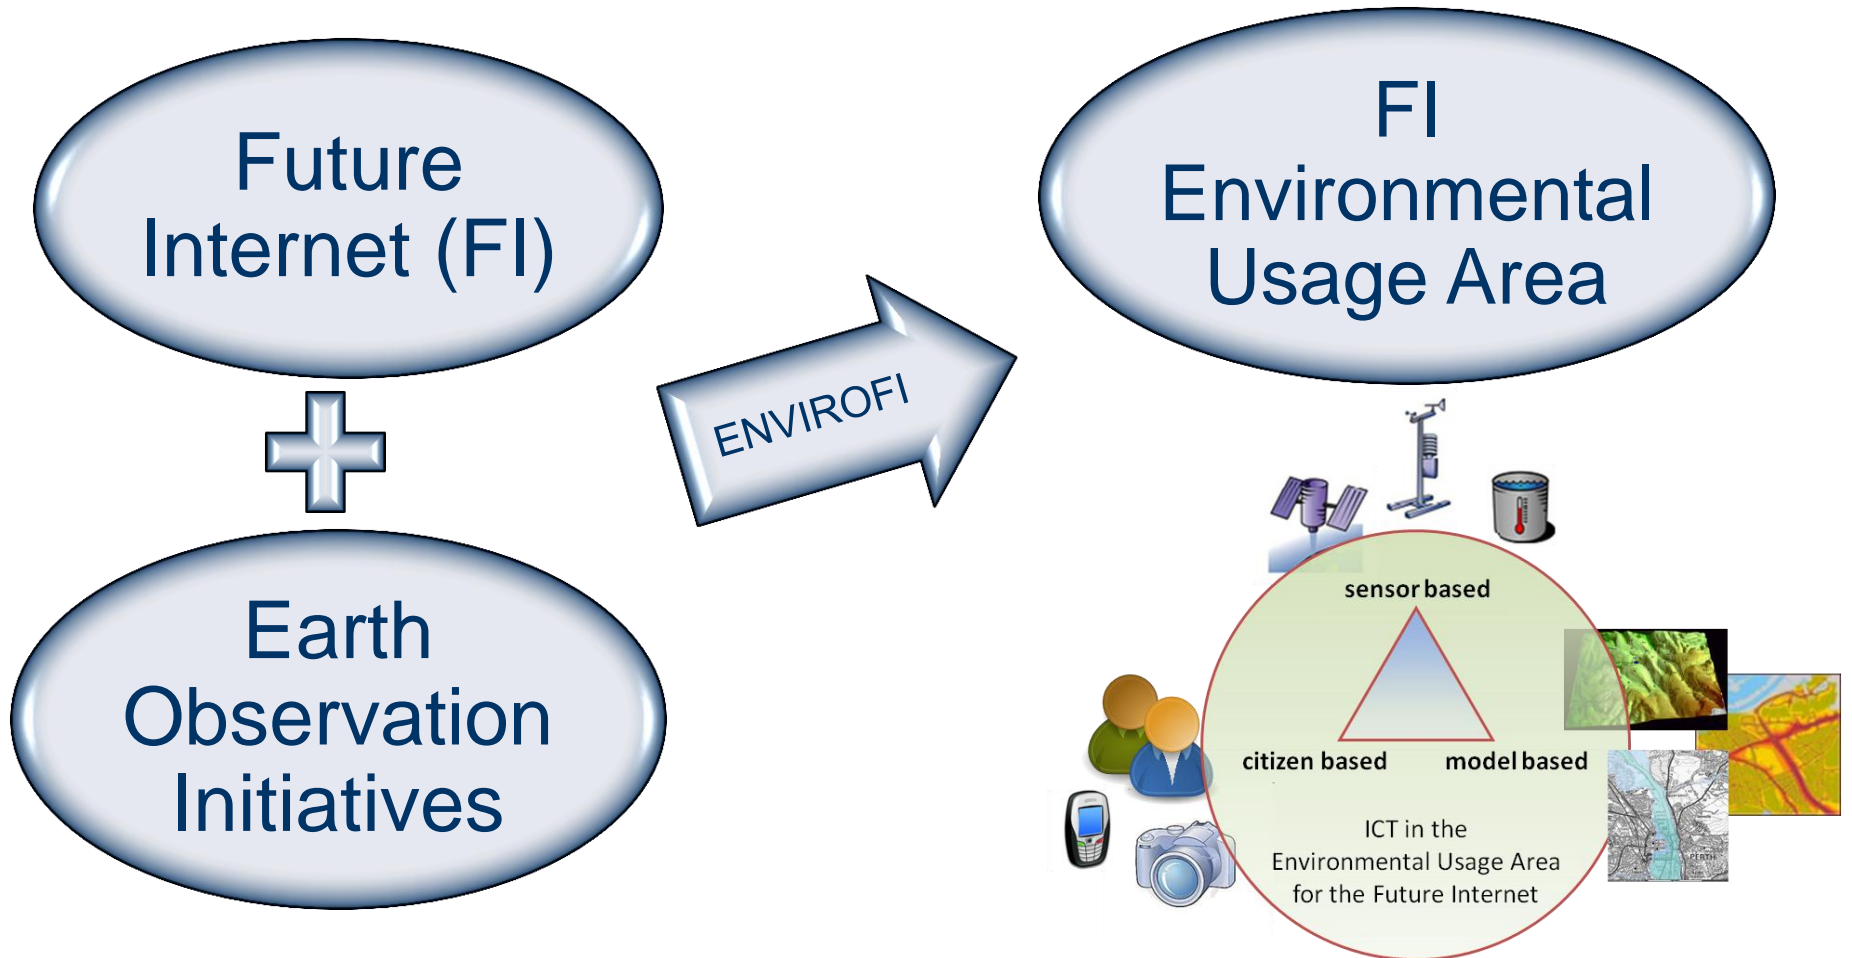

Thomas Usländer, Fraunhofer IOSB
ENVIROFI Team

EGU 2011, Vienna
Session ESSI13/GI-17
6 April 2011

Why ENVIROFI?

ENVIROFI links the Future Internet and on-going initiatives

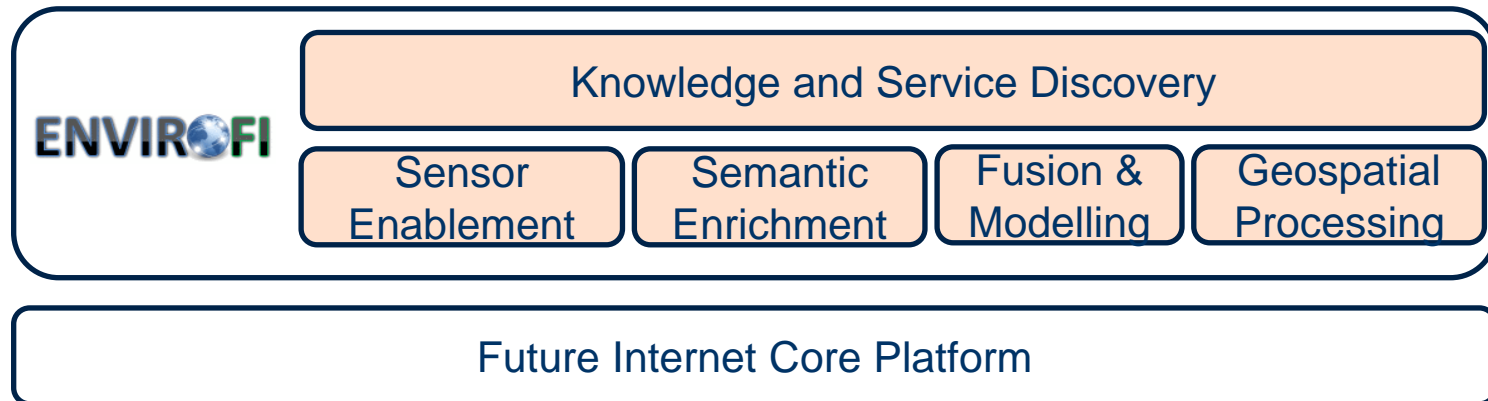

“ENVIROfying” the Future Internet: Requirements vs. Capabilities

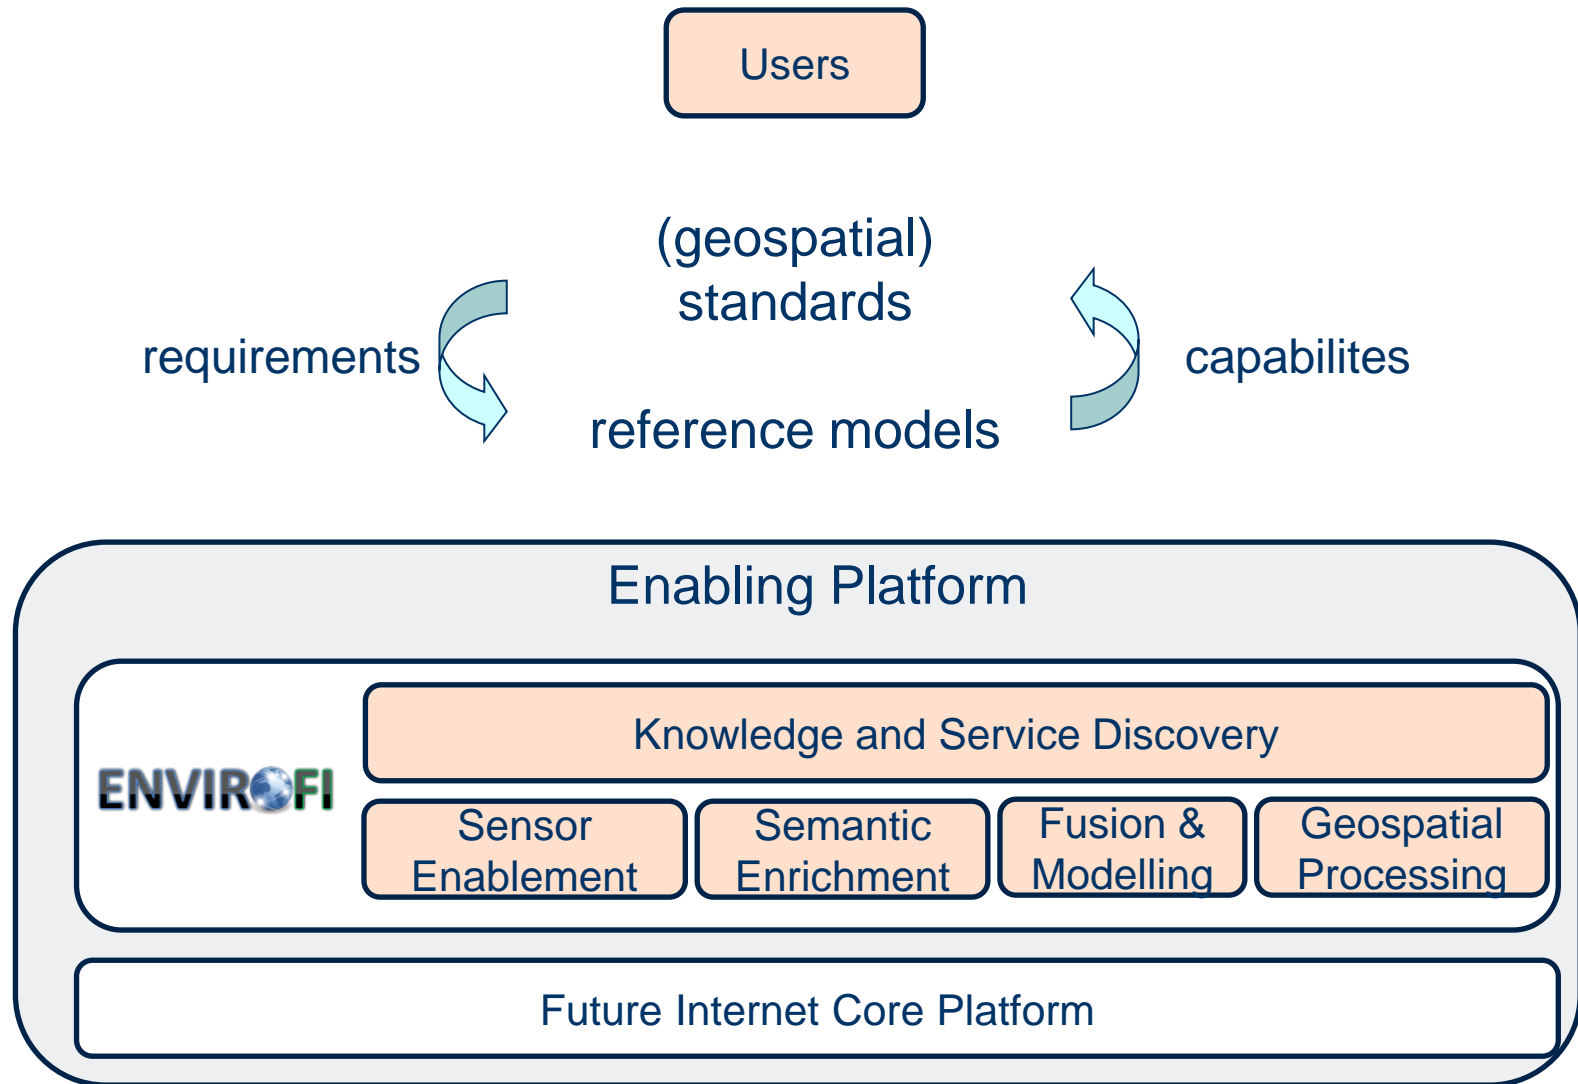

Usage
Examples

Enablers

Which Architecture for the Enabling Platform ?

Compliance with Standards ?

TC/211
19119 NWIP

Air

Biodiv

SensorWeb
Ref.arch

Various
Standardization
activities

MetOcean

TC/287

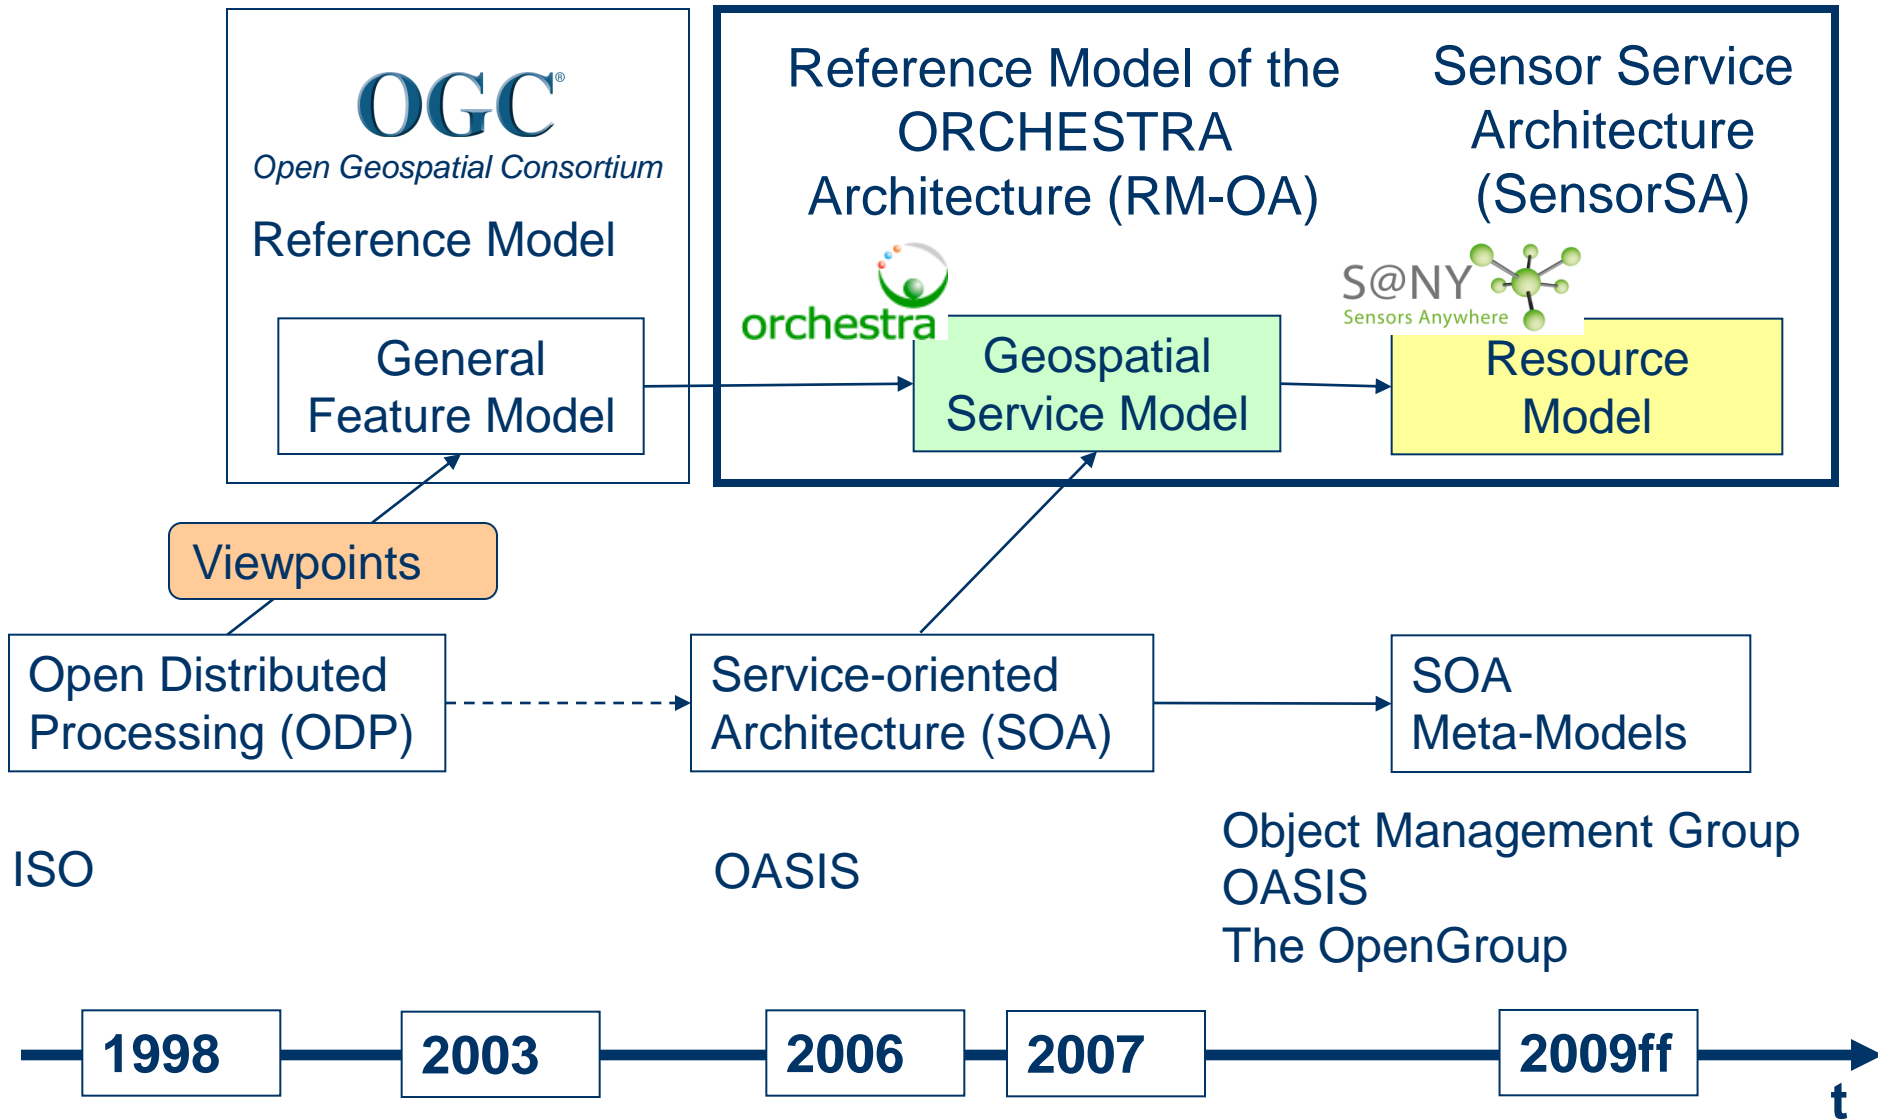

SoaML

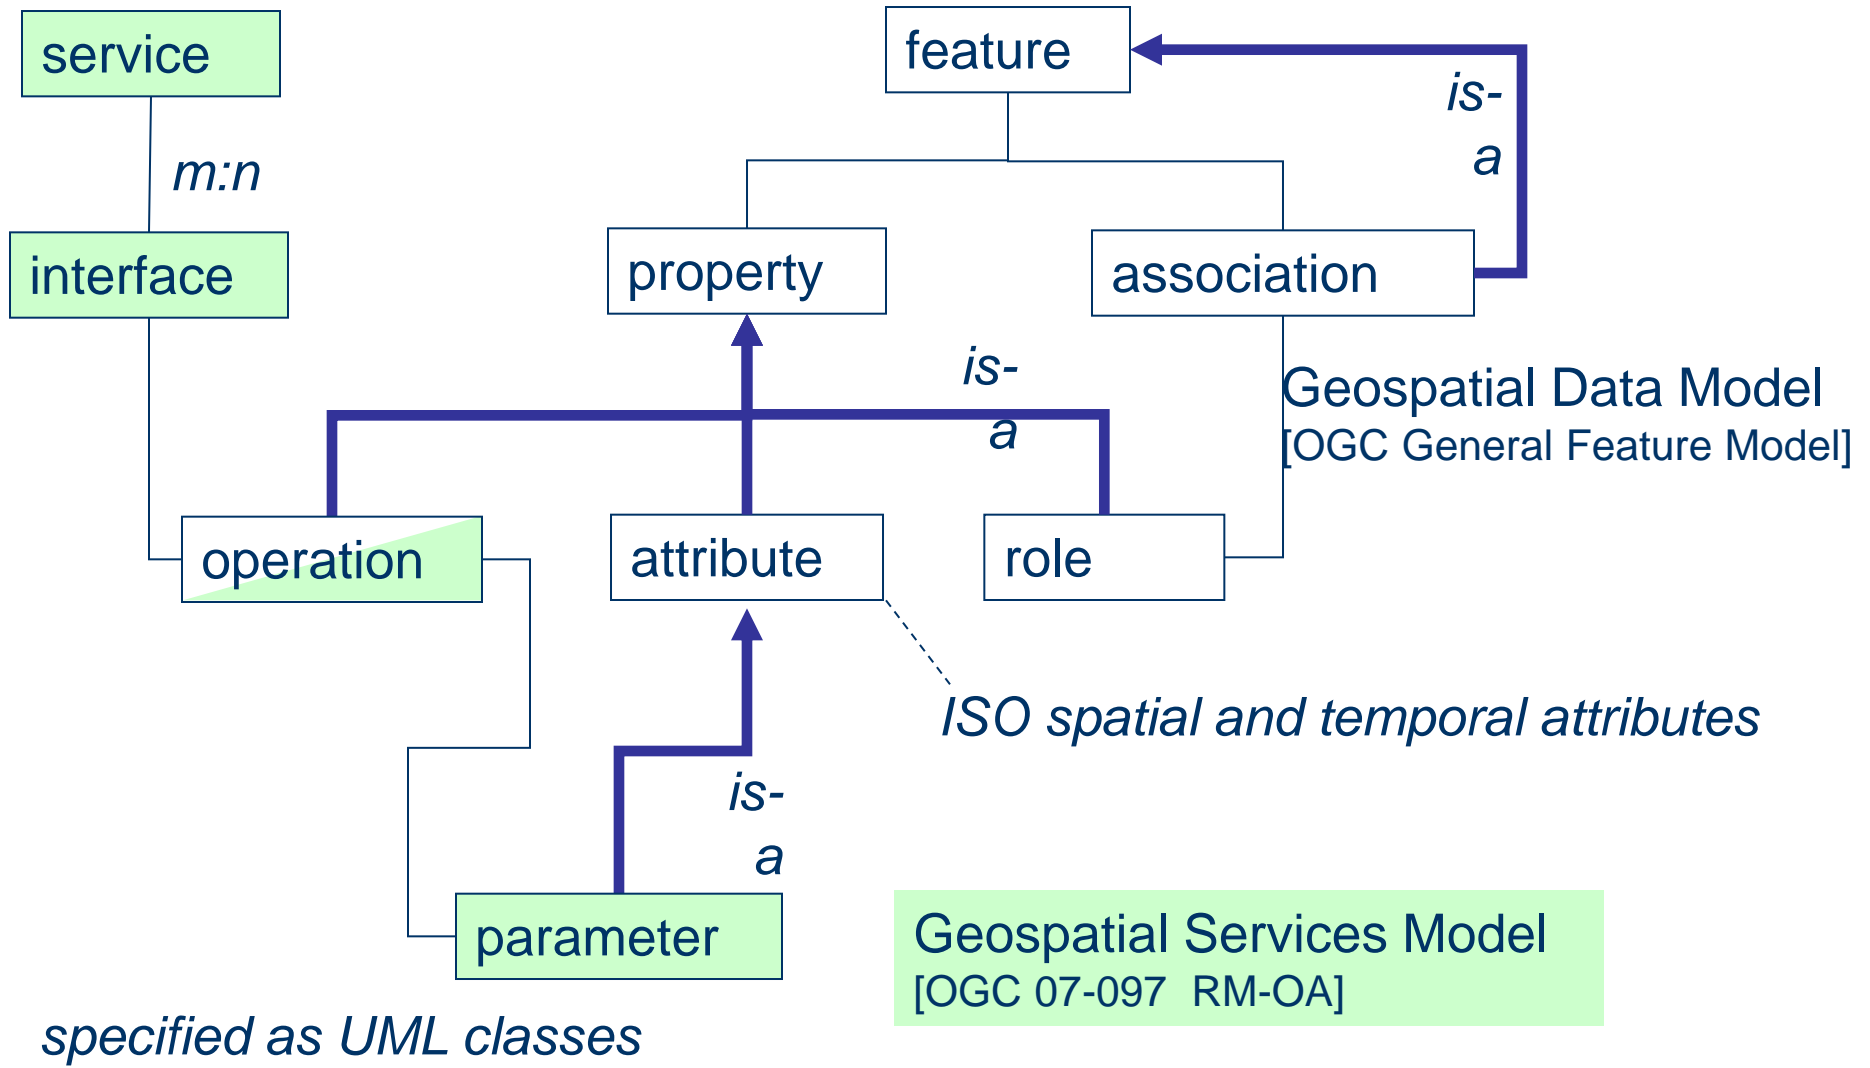

European Committee for Standardization
Comité Européen de Normalisation
Europäisches Komitee für Normung

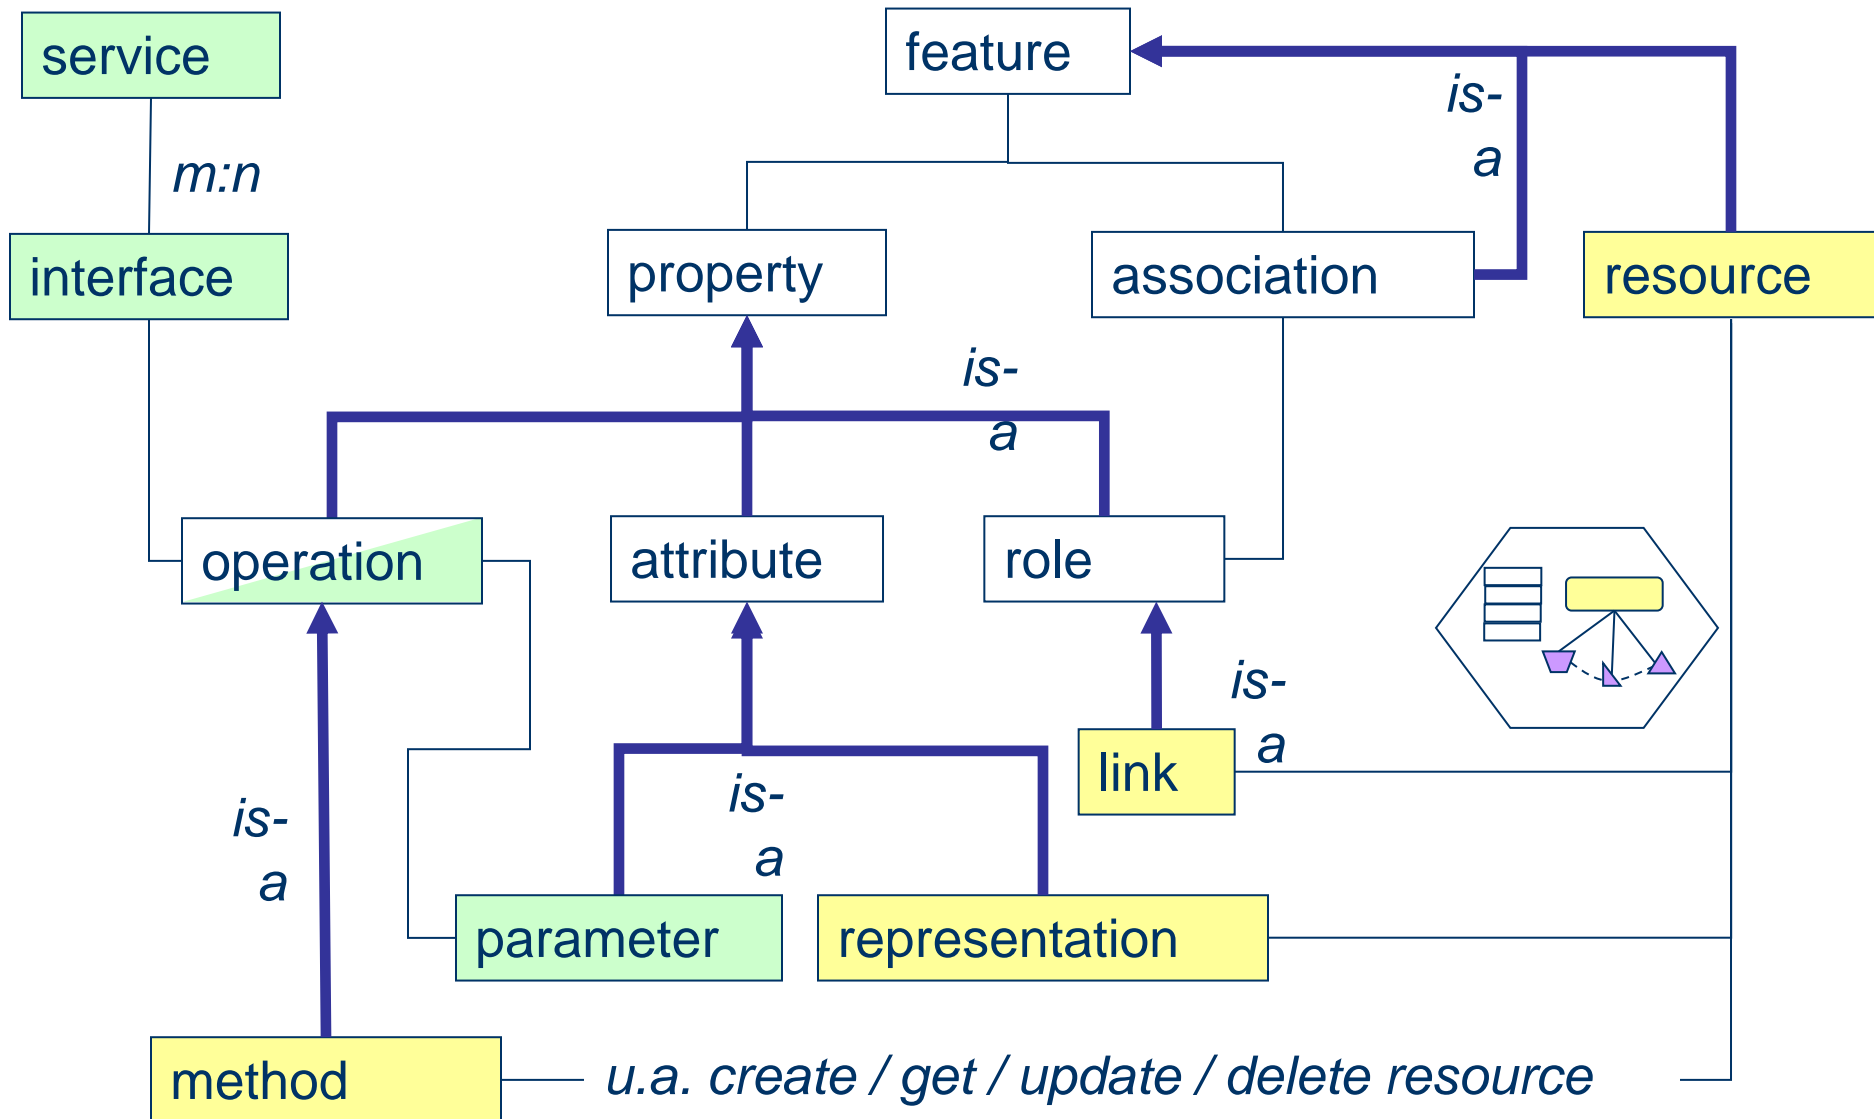

Evolution of SOA Reference Models

OGC Geospatial Data and Service Models

SANY Resource Model [Usländer, 2009]

Challenge (1)

How to characterize an enabling platform architecture ?

Response:

By means of Architectural Styles.

Architectural Styles

Design Patterns

defines

Architectural Style

characterizes

Enabling Platform

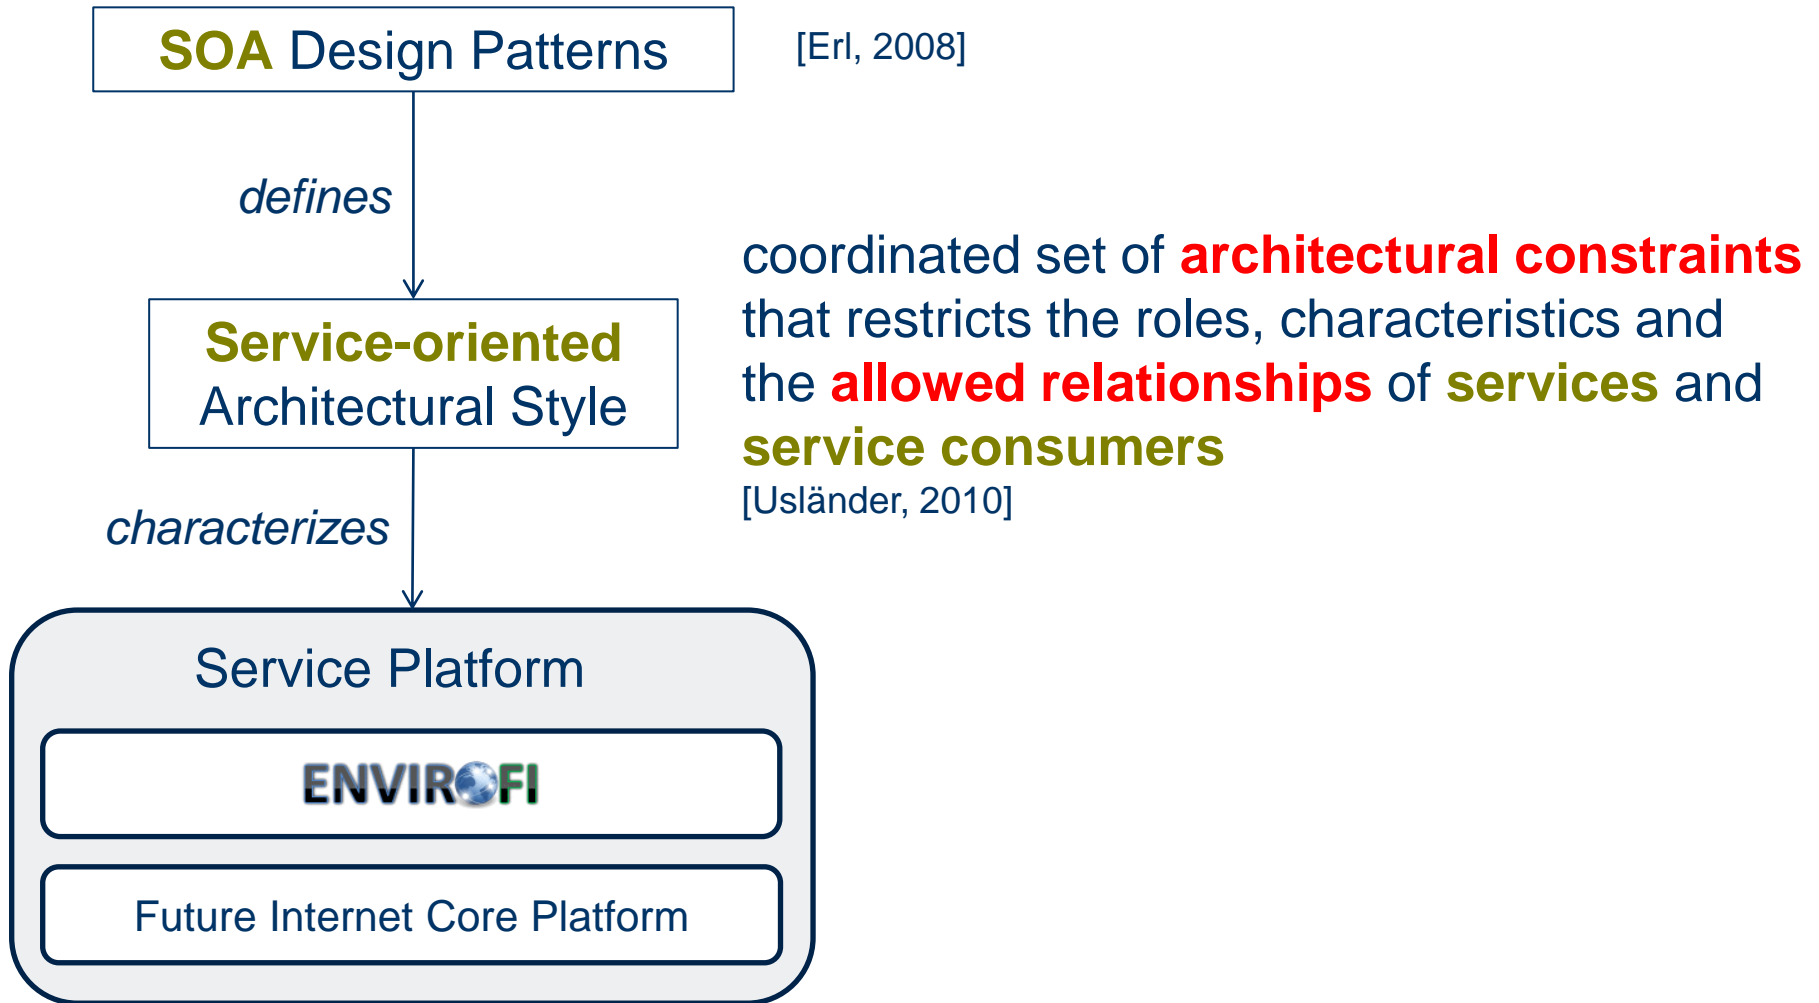

ENVIROFI

Future Internet Core Platform

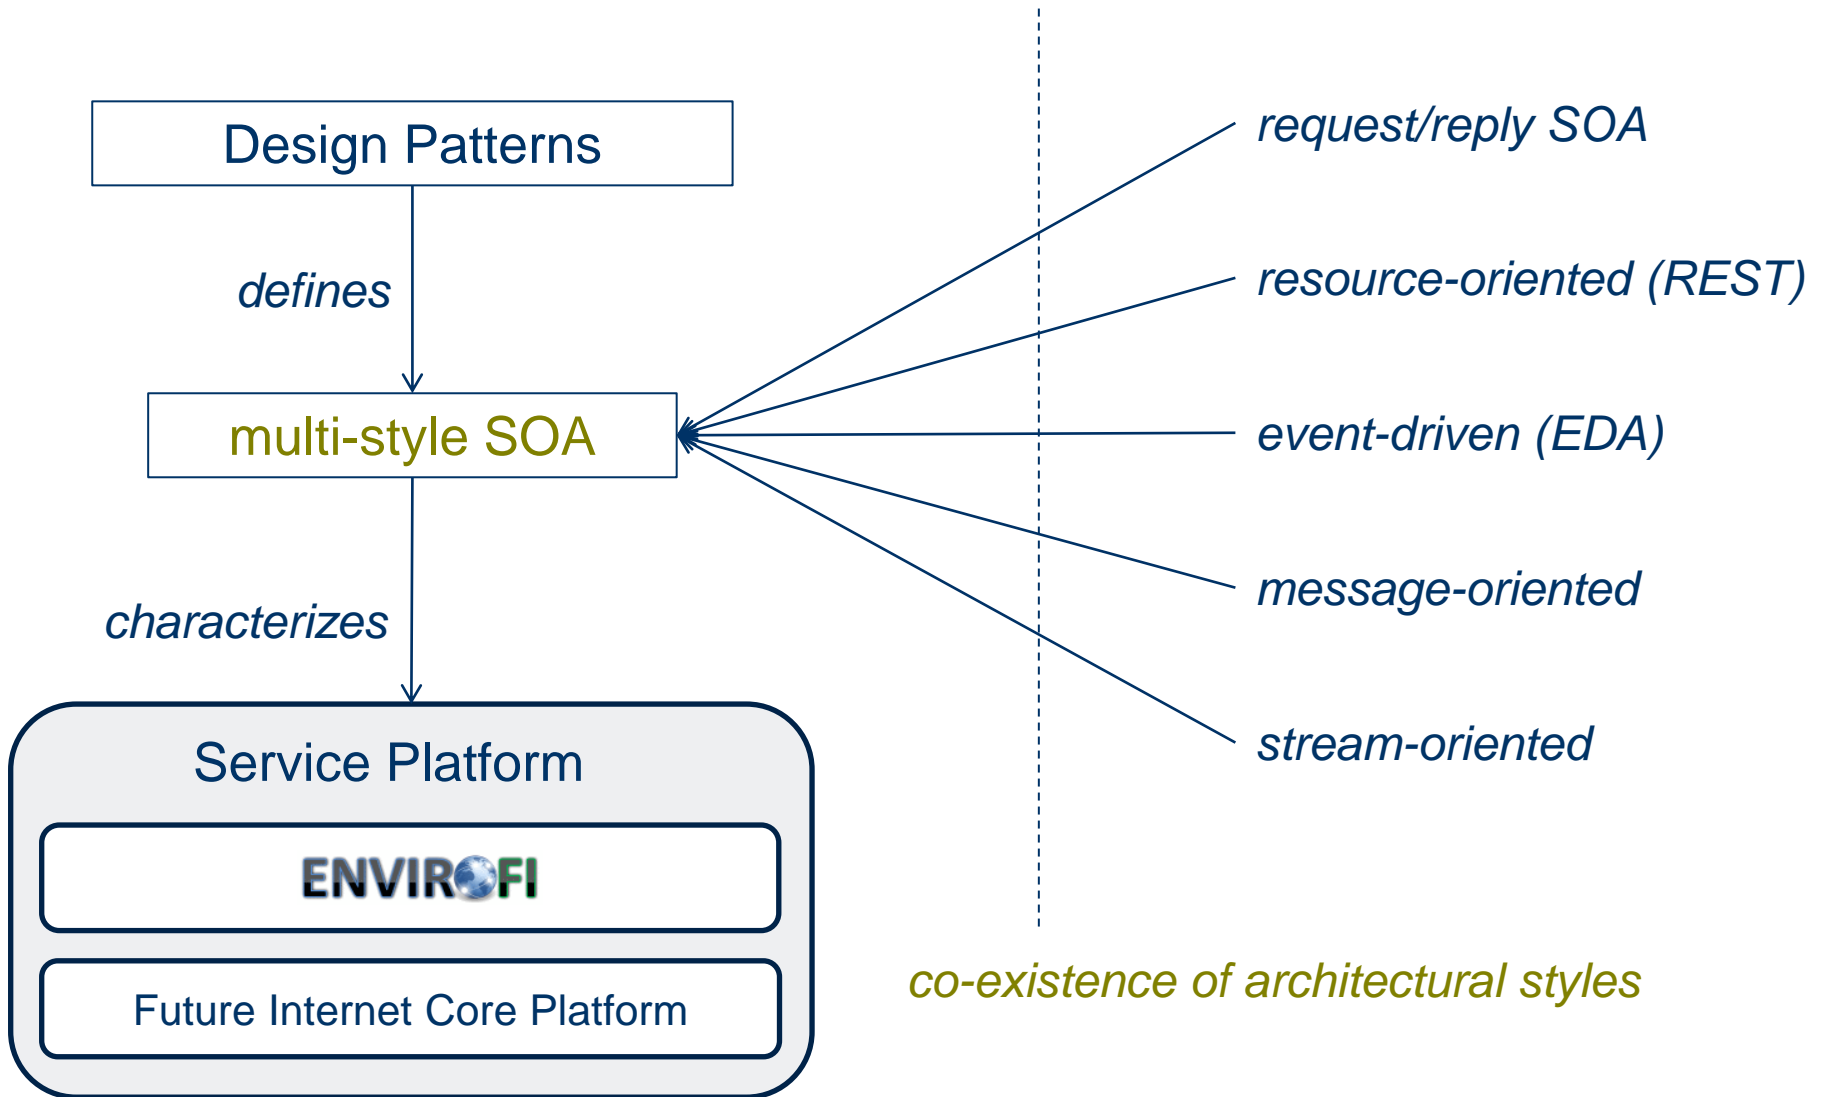

coordinated set of **architectural constraints** that restricts the roles/characteristics[features] of **architectural elements** and the **allowed relationships** among those elements

[Fielding, 2000]

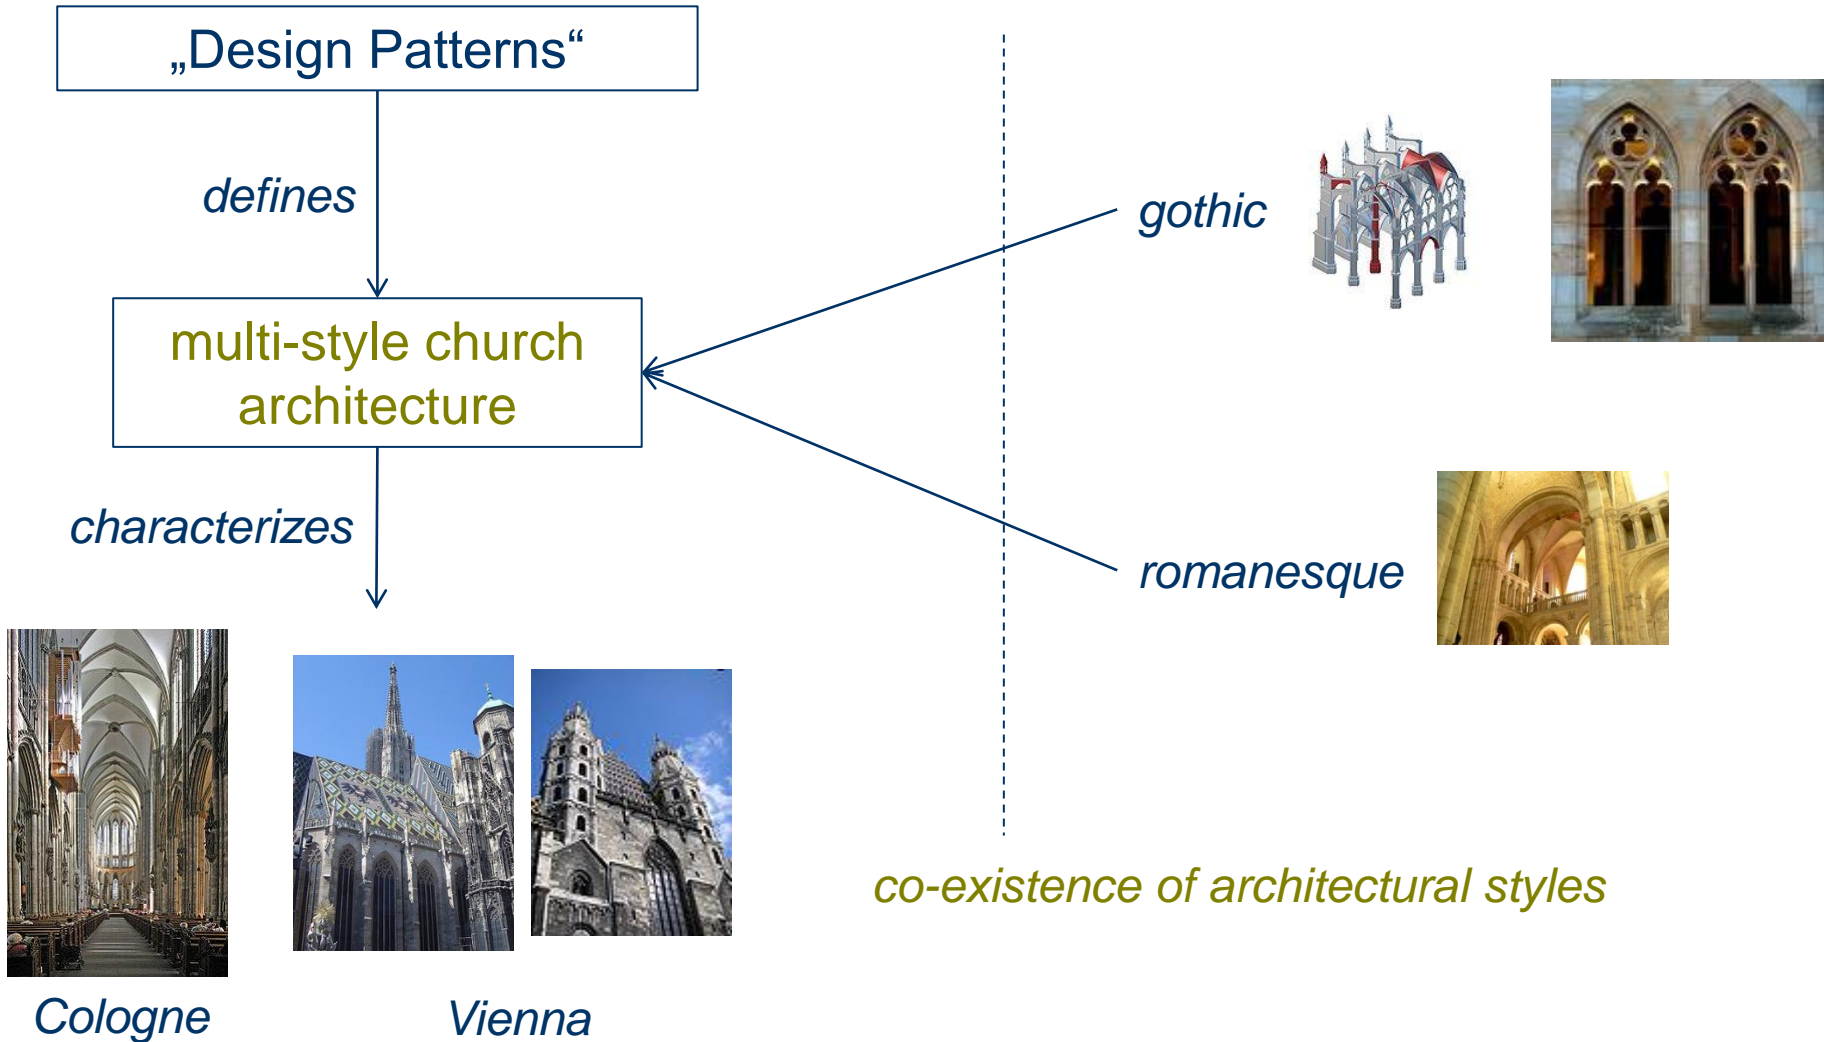

Service-oriented Architectural Styles

Multi-style SOA

Analogy: Multi-style Church Architecture

Challenge (2)

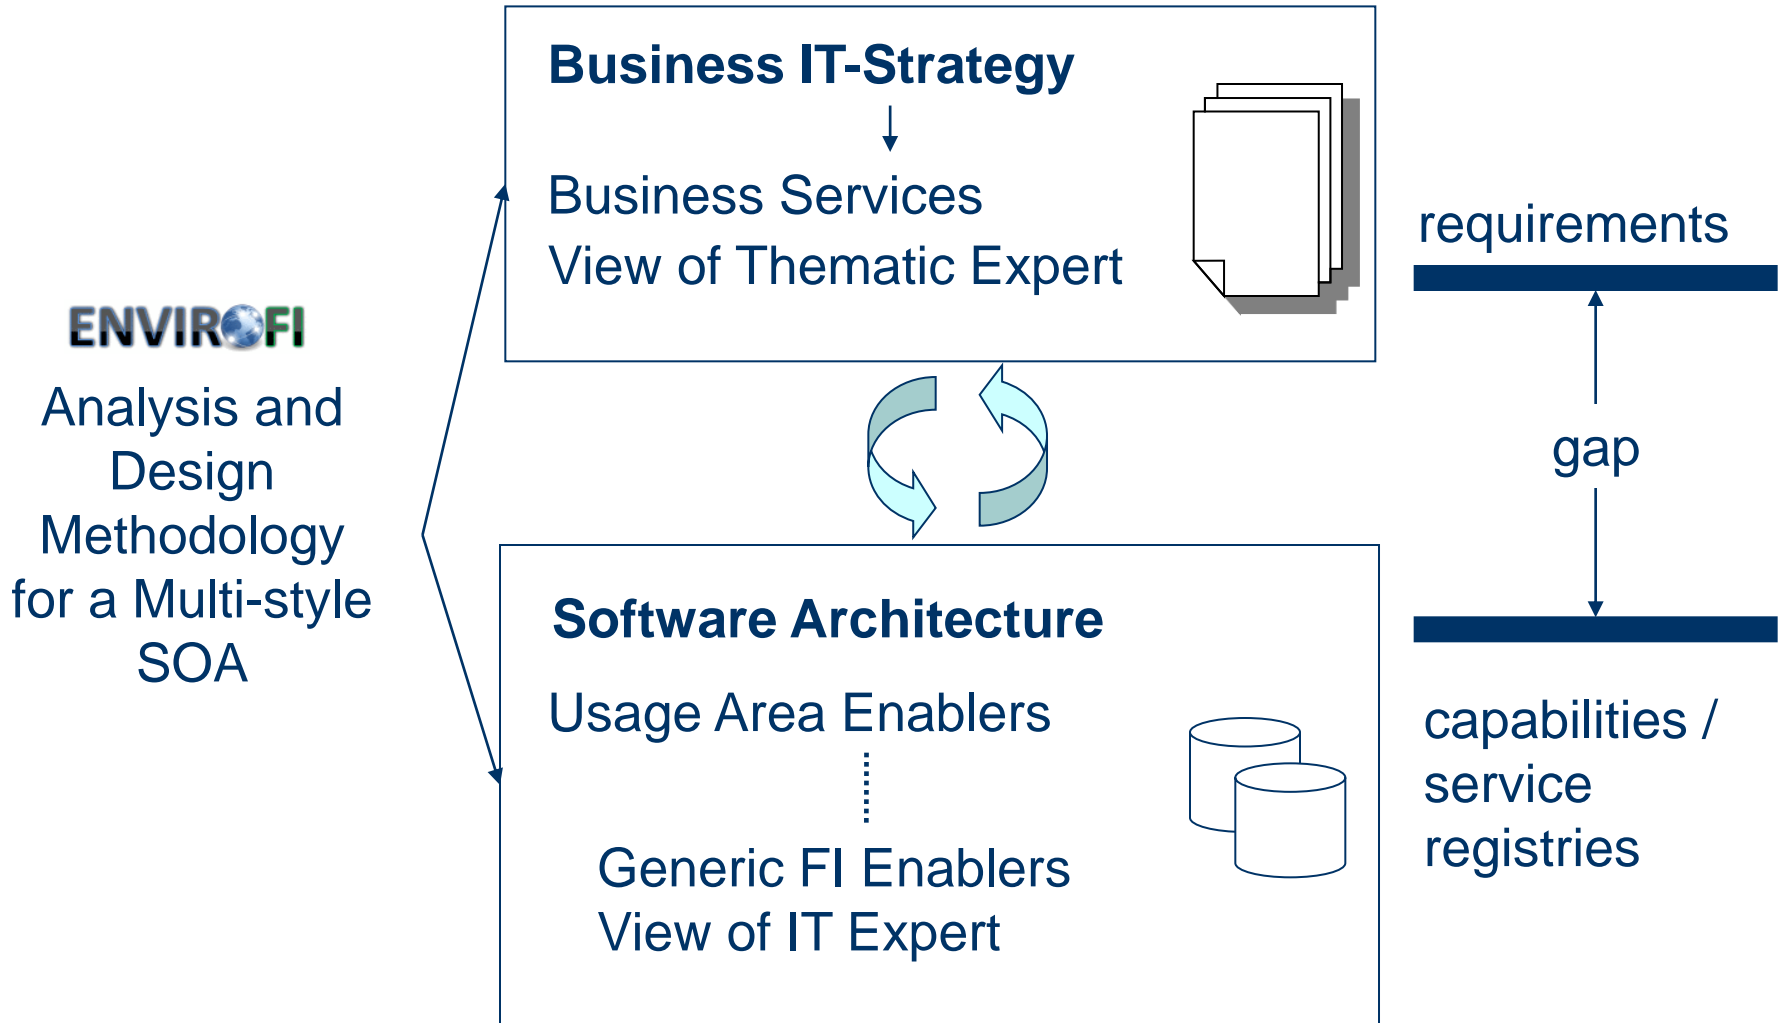

How to map requirements to capabilities in a systematic way ?

Response:

There is a need for an Analysis and Design Methodology for a multi-style SOA.

Basis: extended use case descriptions [Cockburn, 2001]

Need for an Analysis and Design Methodology

Challenge (3)

How to edit the **Architecture Document** ?

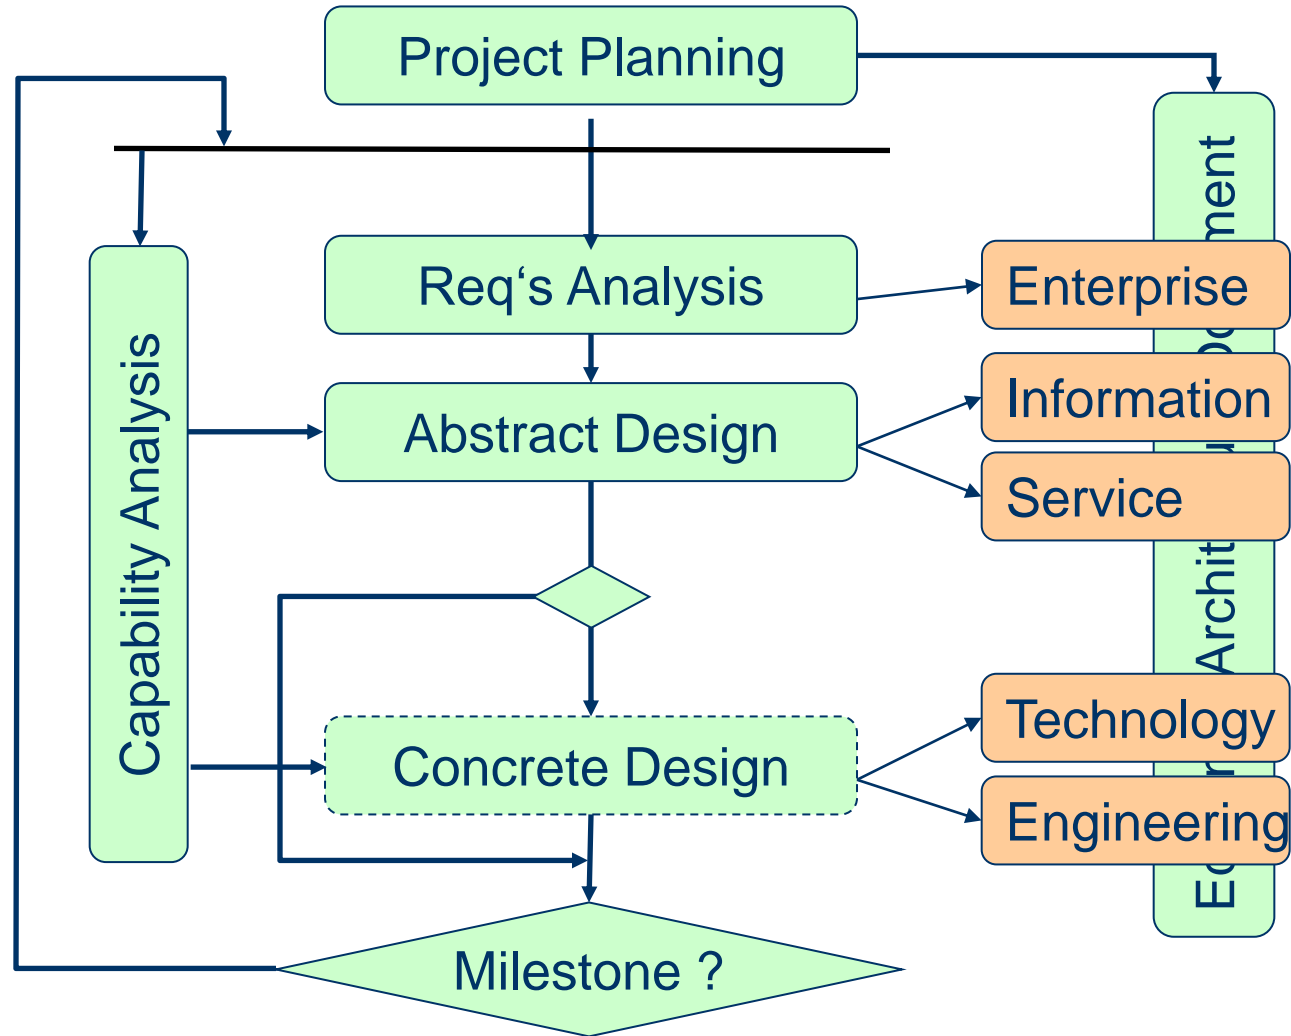

Response:

Iterative documentation according to an interpretation of the viewpoints of the ISO Reference Model for Open Distributed Processing (RM-ODP).

Documentation according to RM-ODP Viewpoints

(1) Iterative Design

(2) Incremental Edition of Architecture Viewpoints

THANK YOU
FOR YOUR
ATTENTION

Dr.-Ing. Thomas Usländer
