eWaterCycle: Global Hydrological Forecast System

- Global @ 10Km resolution (for now)
- GFS Ensemble Forcing
- H-SAF Soil moisture observations

PCRGlob-WB

- **PCRaster GLObal Water Balance 2.0**
- **global hydrology & water resources model**
- **5 arc-min (~10 km) (and increasing)**
- **Implemented in Python using PCRaster(GPL)**
- **More info: HS2.4.2 Large scale hydrology poster session (Wed)**

OpenDA

- Open Source data-assimilation toolbox
- LGPL, Java

<http://www.openda.org>

Basic Model Interface (BMI)

- From **CSDMS** project, now on its way to being **standardize**

- **void initialize (string config_file)**

- void update (double dt)**

- void finalize ()**

- get_value (string var_name)**

- set_value (string var_name)**

+grid + time + units info

+not much else
