Why should girls consider to study geoscience?

“I would encourage girls to study geoscience because it matters so much. It’s really fundamental to the concerns of the moment, to the concerns of the world. It’s fundamental to sustainable development. It’s fundamental to understanding and responding to climate change. It’s fundamental to developing society. And then because of the huge range of opportunities and flavours. The essence of geology is a different way of looking at the world that the general population doesn’t necessarily have. We look at the world and we visualise, we conceptualise the rocks under our feet, the interior of the earth.”

Ruth Allington, Treasurer
European Federation of Geologists

About ENGIE

The ENGIE project aims to turn the interest of girls to study geosciences and geo-engineering, and thus to improve the gender balance in these disciplines. The project is developing an awareness-raising strategy and creating a stakeholder collaboration network for the implementation of a set of outreach actions in more than 20 European countries.
