# Combining citizen science and artificial intelligence to facilitate geology outreach and capture geodiversity:

## prospects from the RockNet project

### 1. Concept

Deep Learning classification model

**input** : photo of rock

**output** : lithology + confidence score

**Likelihood**

Mudrock 87 %

Flint 11 %

Mica schist < 1 %

Citizen science mobile app

**User pictures rock**

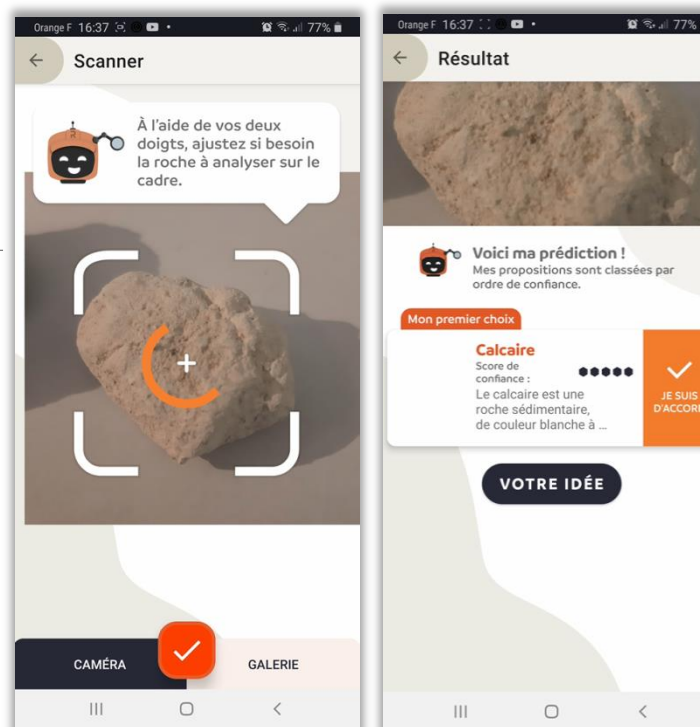

App predicts litho and gives geological info

**User can validate or correct litho**

AI model improves

**User saves picture and litho**

Participative collection grows

### 2. Prototype

**12** litho classes

Training on **2 700** public images

**90 %** of good predictions

### 3. Future work

**Scale up**

More litho classes

Efficient data engineering

**Share**

Partnership with **UNESCO Geoparks**

Community building

**Find funding** 😊

**FULL PRESENTATION**

# ROCKNET IN A NUTSHELL

## Innovative technology

- Lithology recognition from rock samples pictures
- Deep Learning model

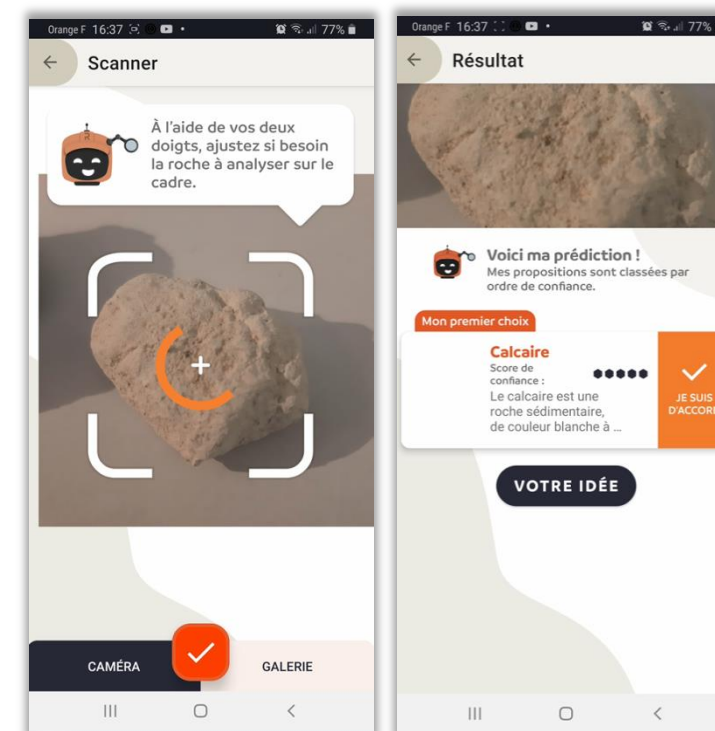

## Mobile application

- Design by a digital communication agency
- Version 1 expected in May 2021

## Citizen science project

- Users can provide feedback on predictions
- Users gather a common collection of rock images
- Every new photo improves the Artificial Intelligence model

# ROCKNET TARGETS

Capture geodiversity

Facilitate geology outreach

[Bouziat *et al.* 2020]

Digital transformation and geoscience education:  
New tools to learn, new skills to grow.

European Geologist, 50.

# HOW DOES IT WORK?

# HOW DOES IT WORK?

# HOW DOES IT WORK?

**Basalt 93%**  
**Shale 2%**  
**Sandstone 1%**

**Sandstone 99%**  
**Dunite < 1%**  
**Limestone < 1%**

**Conglomerate 98%**  
**Flint 1%**  
**Mica schist < 1%**

**Mudrock 87%**  
**Flint 11%**  
**Mica schist < 1%**

**Limestone 37%**  
**Sandstone 32%**  
**Mudrock 26%**

# CURRENT PROTOTYPE

Transfer Learning method

**12** litho classes

Training on **2 700** public images

**90 %** of good predictions

- Sandstone
- Conglomerate
- Mudrock
- Limestone
- Flint
- Evaporite
- Orthogneiss
- Micaschist
- Granite
- Basalt
- Gabbro
- Dunite

# FIRST PARTNERS

## UNESCO Global Geoparks

Nancy school of Geology  
Lorraine University

Saint-Etienne school  
of Telecom engineering  
University of Lyon

# NEXT CHALLENGES

- Set a robust data architecture
- Improve AI model
- Build a community of users
- Find funding

**Partners welcome!**

# Thanks for your attention!
