## OBJECTIVE

Our study analyze how experiences with extreme weather can be related to risk perception, communication, and adaptive behaviors.

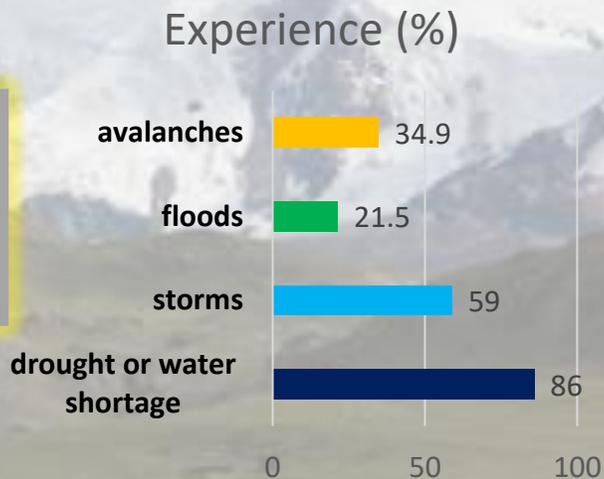

## METHODS

- Online Survey
- Pilot
- 200 Participants
- Phinaya

## RESULTS

97.5% said they were very concerned about climate change

## CONCLUSION

Most people have been exposed to more than one type of extreme events such as droughts and storms. This study contributes to a better understanding of the relationships between public perception of climate change in Andean communities and corroborates the important role of communication and adaptive behaviors in the context of risk perceptions.
