

Experimental assessment of soil protection by vegetation for current crops and for up-coming EU glyphosate ban

**Jakub Stašek, Josef Krása, Adéla Roudnická,
Tomáš Dostál, Martin Mistr, Jan Devátý**

Faculty of Civil Engineering, CTU in Prague

Workplace and equipment

- **Department of Soil Water Conservation**
 - **Faculty of Civil Engineering, Czech Technical University in Prague**
- **Rainfall simulator**
 - **field 8x2m**
 - **laboratory 2x1m**

Cover management factor- C factor in Czech Republic

- **Predicting Rainfall Erosion Losses by Wischmeier & Smith (1978)**
 - **Transformed into czech conditions by Janeček (2002)**
 - **Modified and updated in Janeček (2012)**

Field rainfall simulator

- **The aim is to estimate crop cover factor for RUSLE**
- **Experiments on bare soil and crops**
- **Dry and wet soil conditions**
- **Artificial rainfall → surface runoff and sediment transport → collecting samples**
 - **60 mm/h for 30 minutes after surface runoff starts**
 - **Samples taken every 2,5 minute**

Dataset of experiments

- **Since 2016 experiments on several plots, 3x per year, in total 341**
 - In 2016 - 65 experiments
 - In 2017 - 71 experiments
 - In 2018 - 77 experiments
 - In 2019 - 44 experiments
 - In 2020 - 84 experiments
- **On most common crops and various management practices**
 - Cereals (wheat, barley, rye)
 - Corn, sunflower, *sorghum*
 - Rapeseed, pea, mustard, alfalfa, buckwheat
 - And bare soil as reference
- **Dry and wet soil conditions**

Preliminary results – SLR curves

- **SLR – Soil Loss Ratio is an estimate of the ratio of soil loss under actual conditions to losses experienced under the reference conditions (bare soil)**
 - **C factor value is an average Soil Loss Ratio weighted according to the distribution of R during the year**
- **Start with sowing date and has several fixed intervals**
 - **14 days for first crop development stage**
 - **curve itself – based on measured data**
 - **7 days after harvesting – based on measured data**
 - **7 days soil preparation phase before tillage – measured data**

- **SLR curves show increasing soil protection as the plant develop**
- **Differences in crops**
 - **In the speed of soil protection development**
 - **In the final SLR**
- **Curves are better for later processing**
 - **Easy to change for local agricultural condition and combine with local R factor**
- **With the upcoming glyphosate ban it is important to search for alternative methods of farming**
 - **and know which ones are good for environment**

Run-off database

- **Publicly available database of runoff experiments**
 - aims for large dataset
- **Valuable resource for calibration and validation of mathematical models**
