How can **Global Water Watch** improve **Anticipatory Action** in the Red Cross Red Crescent Movement?

Human-Centered Design Method

Case studies

Mozambique Red Cross Society (CVM)

Zimbabwe Red Cross Society (ZRCS)

Baphalali Eswatini Red Cross Society (BERCS)

Persona journey

Responsive Action

Anticipatory Action

Persona journey in Responsive Action

Local observation

Report chain Local-District-Provincial-National Level-National Society

Prepare for action

Distribution of goods

Severe impact of drought

Not enough and/or the right information is transferred

Persona journey in Anticipatory Action

Severe impact of drought

Prepare for action, FbF, EAP

Alert all parties, start action

Additional action

Trigger based on ENSO + SARCOF (6 month lead time)

Trigger based on seasonal outlook

Trigger based on biophysical parameters

Trigger based on crop production report

•

Accuracy not enough to perform action

Tight schedule to put action in place

Only one reference to monitor the impact of the action

Proposed products

- 1. Monitor **surface water** in Near Real Time (high impact, low effort)
- 2. Monitor Water **volumes** in Near Real Time (high impact, high effort)
- **3. Forecasting** water surfaces or volumes (high impact, high effort)
- **4. Communication** support tools (low impact, low effort)
