

1

Creating a sense of love and care for Brantas River

2

Inviting the community to research and water quality monitoring by *Citizen Science*

3

Giving information on the bad effect of Microplastics and persuade public to reduce single-use plastics

Plastic Bottle Installation Tunnel

3444 plastic bottles were visualized as bottle installation tunnels representing the amount of plastic waste in the Brantas river. We want to educate people, how importance reducing the single-use plastic.

River Photo Gallery

Describes the current situation of Brantas river. Previously, the Brantas river was clean from single-use plastic waste, but today the river is filled with millions of plastic waste that was degraded into Microplastics.

Microplastic Laboratory

The community involved in water quality research testing and identify Microplastic in the river. The test results are useful as information to the community about the health condition of the river around them. Also to increase public awareness, how importance to protecting the river.

Pokka Refill Store and Women's Community

introducing a distribution system for household products in the future with a refill system. Visitors, especially women, can buy soap, sauce, soy sauce and oil (house hold products) by bringing their own containers. Educate women to shop wisely while reducing the plastic packaging.

Zero Waste Cities

Promoting the *Zero Waste Cities* as waste management system. Encouraging household behavior to sorting the waste from house with the aim of maximizing waste management. If the waste management running well, it will not leak into enviromental and sustainable.

The Tree of Hope

The Tree of hope as a media to tell the hopes, aspirations, solutions related to river problems. Visitors are free to write their wishes for the river in the future on colorful paper media and after that they can hang on it.
