GAS FLOW IN GRANULAR MEDIA

Motivation:

Understand gas flow through (porous) granular media

Aim:

- Determine material specific parameters
 - + functional dependencies (e.g.: average grain diameter d_g , porosity $\epsilon...$)

Empty volume fraction = porosity ε

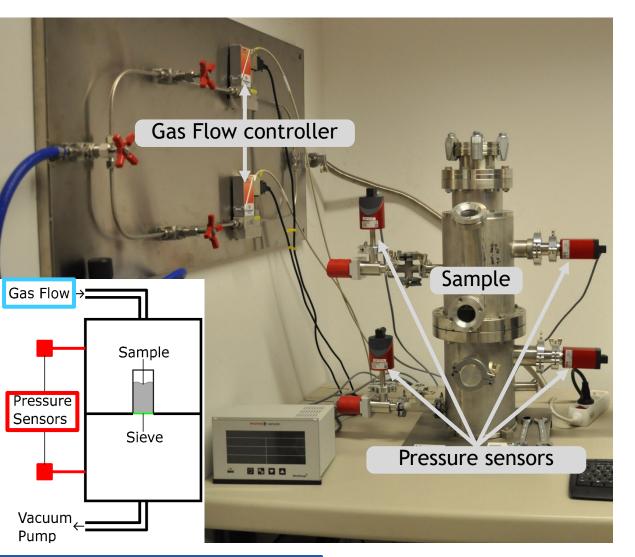

Model:

Diffusion law with pressure dependent coefficient

$$J = -\frac{1}{RT} \left(D_K + \frac{pB}{\mu} \right) \nabla p$$

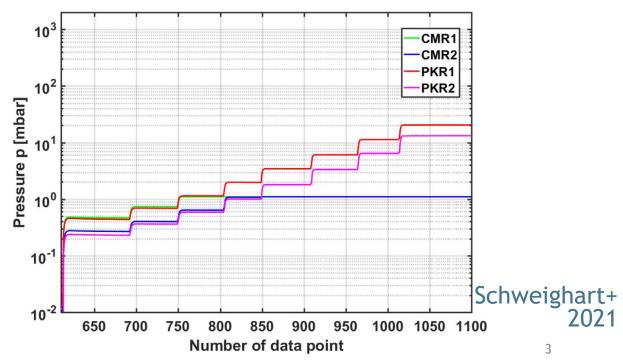

GAS FLOW EXPERIMENT

$$J = -\frac{1}{RT} \left(D_K + \frac{pB}{\mu} \right) \nabla p$$

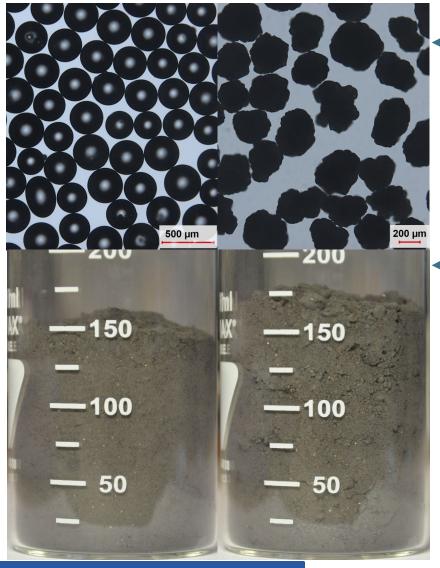

- Viscous permeability B
- Knudsen diffusion coefficient D_K

OEAW.AC.AT/IWF Number of data point

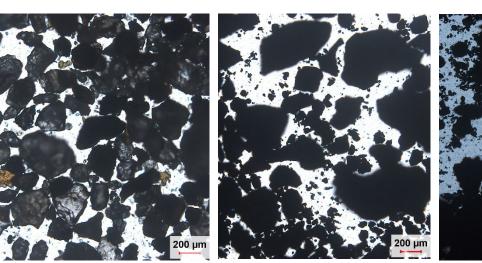

SAMPLES

- Glass Beads (GB)
 - 11 size groups, 45 μm to 4.3 mm

- Analogues
 - Asteroid
 - Quartz sand
- Martian

Lunar

FEM SIMULATIONS

Model baseline:

- Stationary and transient studies
- Boundary conditions matching experiment

$$\frac{\partial}{\partial t} = 0$$

Input:

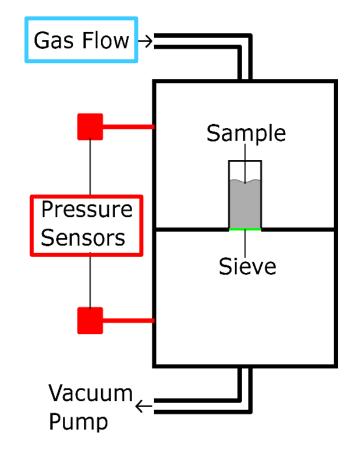

• B, D_{K} , ϵ , downstream equilibrium pressure (stationary studies)

Output:

Steady-state and transient pressure distribution in sample

Comparison:

Equilibrium pressure upstream and downstream of sample

INITIAL RESULTS

Relative deviation 1- $p_{u,ss}/p_{u,m}$ (%)

(0.15 mg/s	0.58	1.17	0.80	2.15	3.56	9.30	7.26	13.35	17.42	20.04	23.28
	0.3 mg/s	-2.02	-1.62	-2.13	-7.42	-2.45	1.96	0.11	-7.87	-3.06	-2.05	0.56

Larger deviations:

 $d < 250 \mu m$

-10

-20

-30

→ grain angularity

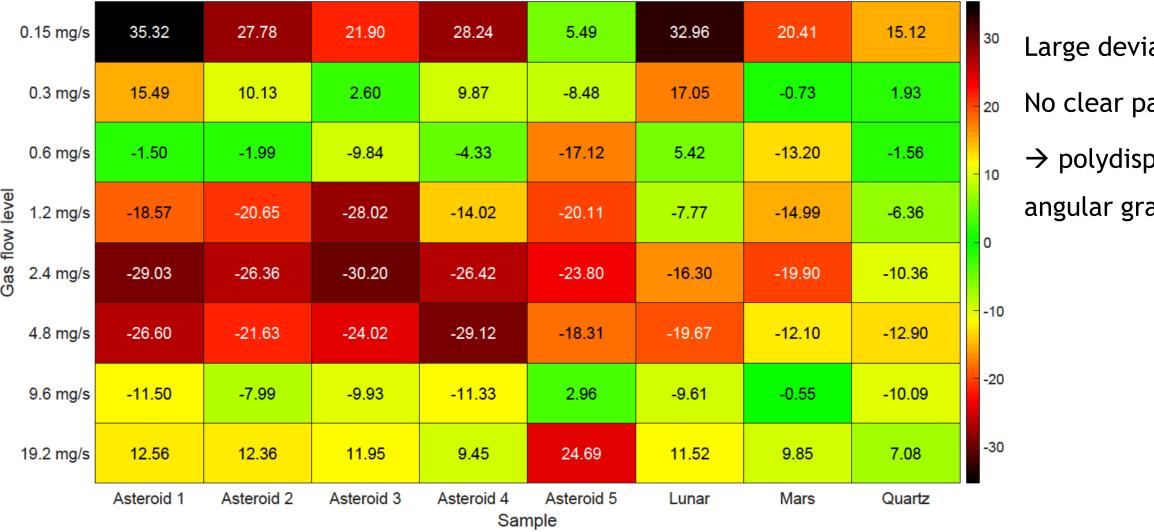

Sample

OEAW.AC.AT/IWF

INITIAL RESULTS

Relative deviation 1- $p_{u,ss}/p_{u,m}$ (%)

Large deviations:

No clear pattern

→ polydisperse, angular grains

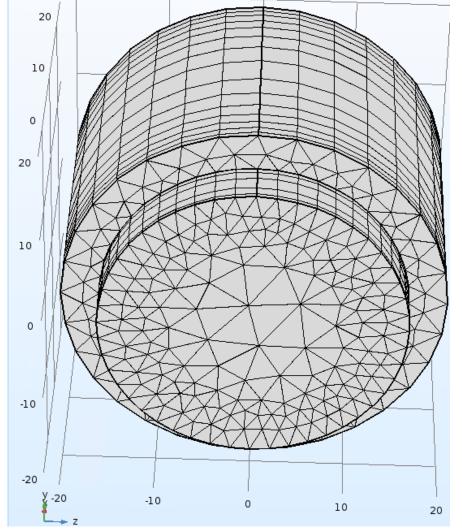

ANALYSIS OF ERROR SOURCES

Experiment geometry:

- d=40 \rightarrow d=36 mm: error of $\Delta p \approx 4-7 \%$
- d=40 \rightarrow d=32 mm: error of $\Delta p \approx 10-18\%$

ANALYSIS OF ERROR SOURCES

Packing properties:

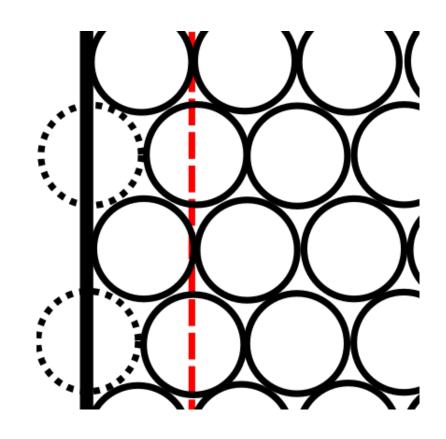

- Boundary layer with higher ε (35%→54%)
- Error of Δp:
 - >50% for largest beads
 - <10 % for medium beads</p>
 - <5 % for smallest beads</p>

$$D_K \sim \frac{\varepsilon^2}{1 - \varepsilon}$$

Asaeda+ 1974

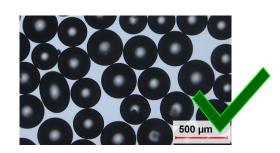

$$B \sim \frac{\varepsilon^3}{(1-\varepsilon)^2}$$

Kozeny-Carman model (Pinto+ 2009)

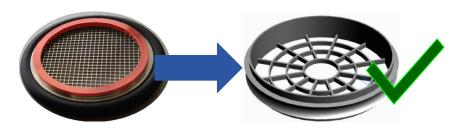

Applicability of model:

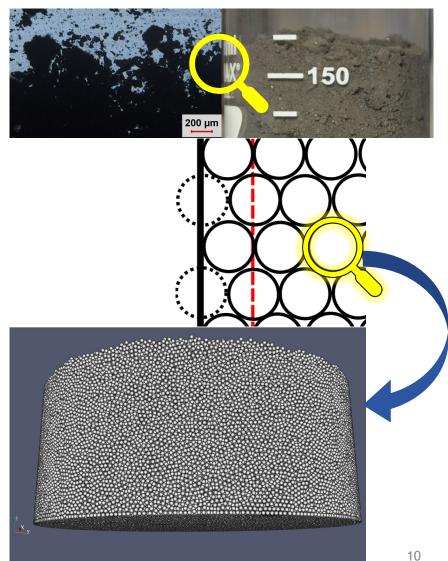

Error sources:

- Alternative simulation methods
 - DEM \rightarrow for virtual samples
 - Particle codes for gas flow
