EGU2023, 25/4/2023

Early Warning Systems

Cost-effective

3.1 B\$ pledged at COP27
“Early Warning for All”

Emergency action

Inform vulnerable populations
Mobilize emergency measures

Location, timing and impacts?

Advanced technologies are available
Make sure it works locally!

Early Warning Systems

Cost-effective

HERE THINGS GO WRONG!

Rapid global hazard forecasting

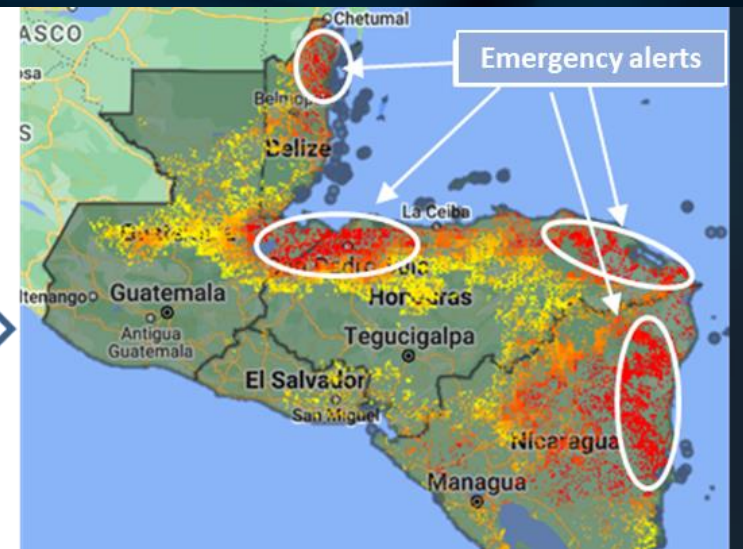

Static hazard map

Hazard driver: precipitation

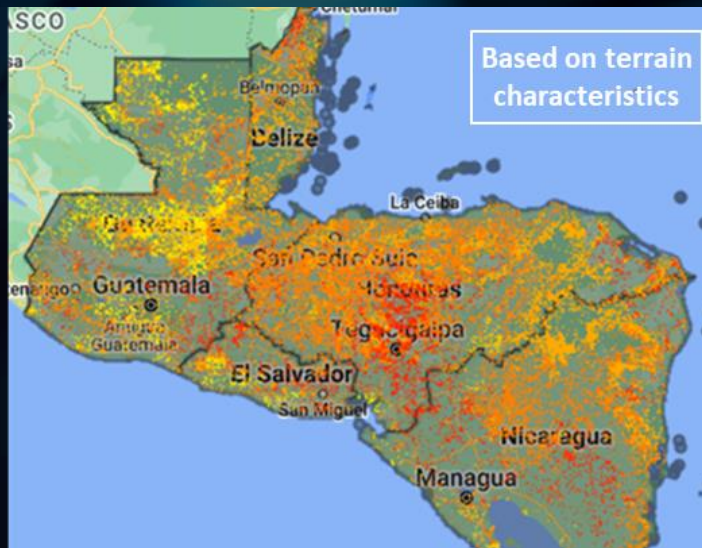

Dynamic hazard map: early warning

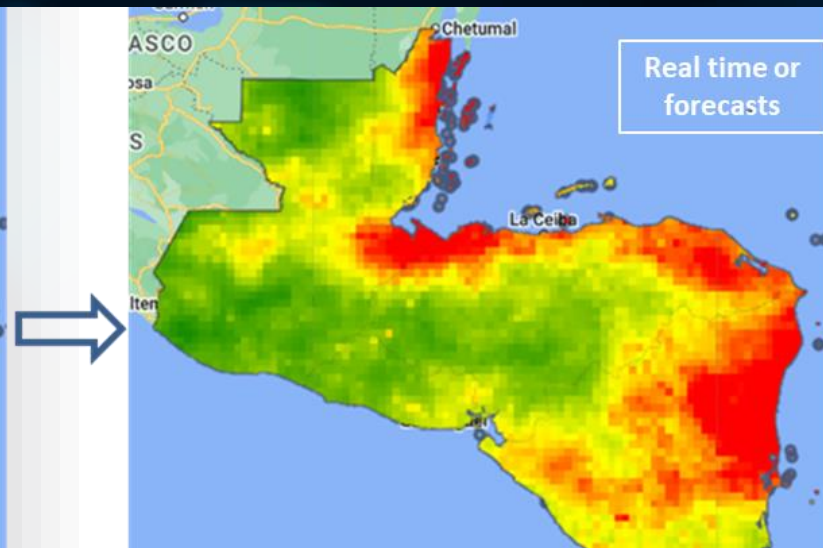

Rapid global hazard forecasting

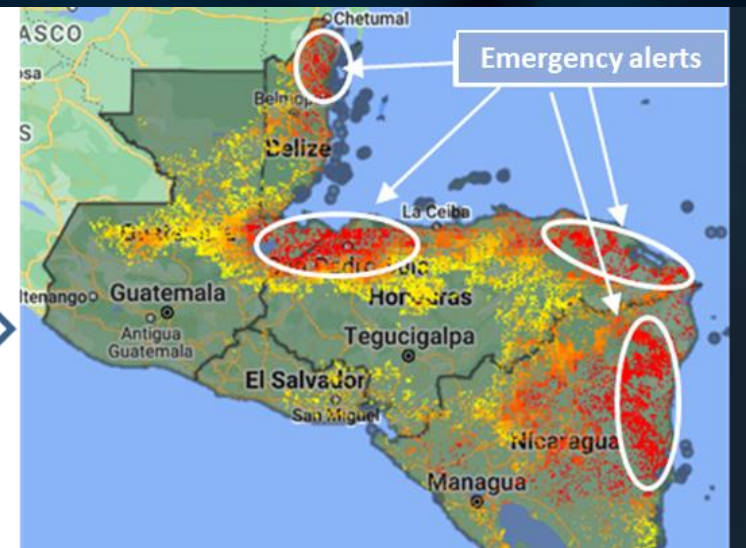

Static hazard map

Hazard driver: precipitation

Dynamic hazard map: early warning

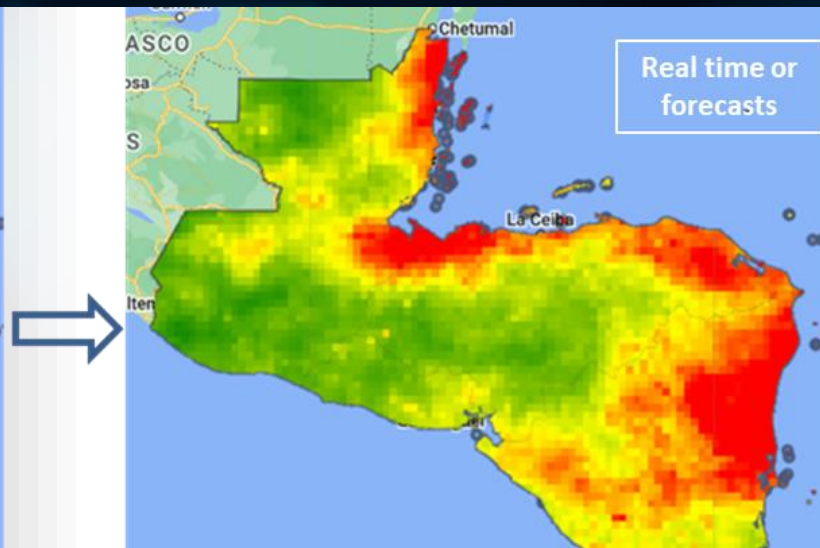

Data is available globally!

Rapid global hazard forecasting

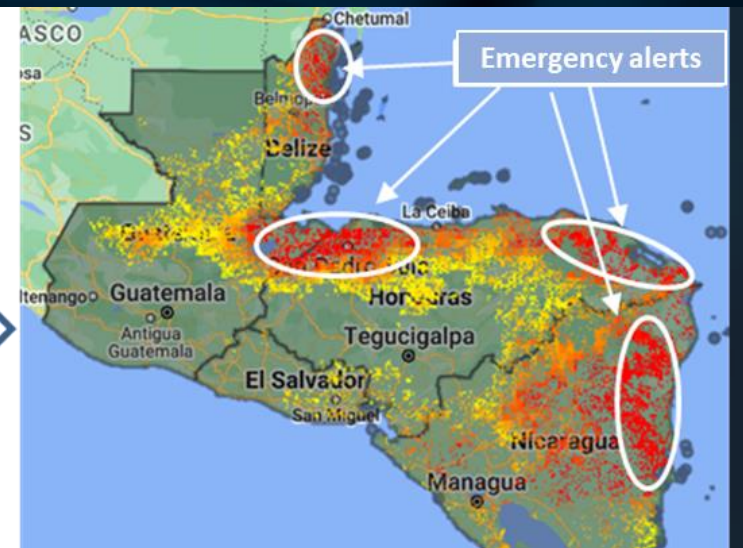

Static hazard map

Hazard driver: precipitation

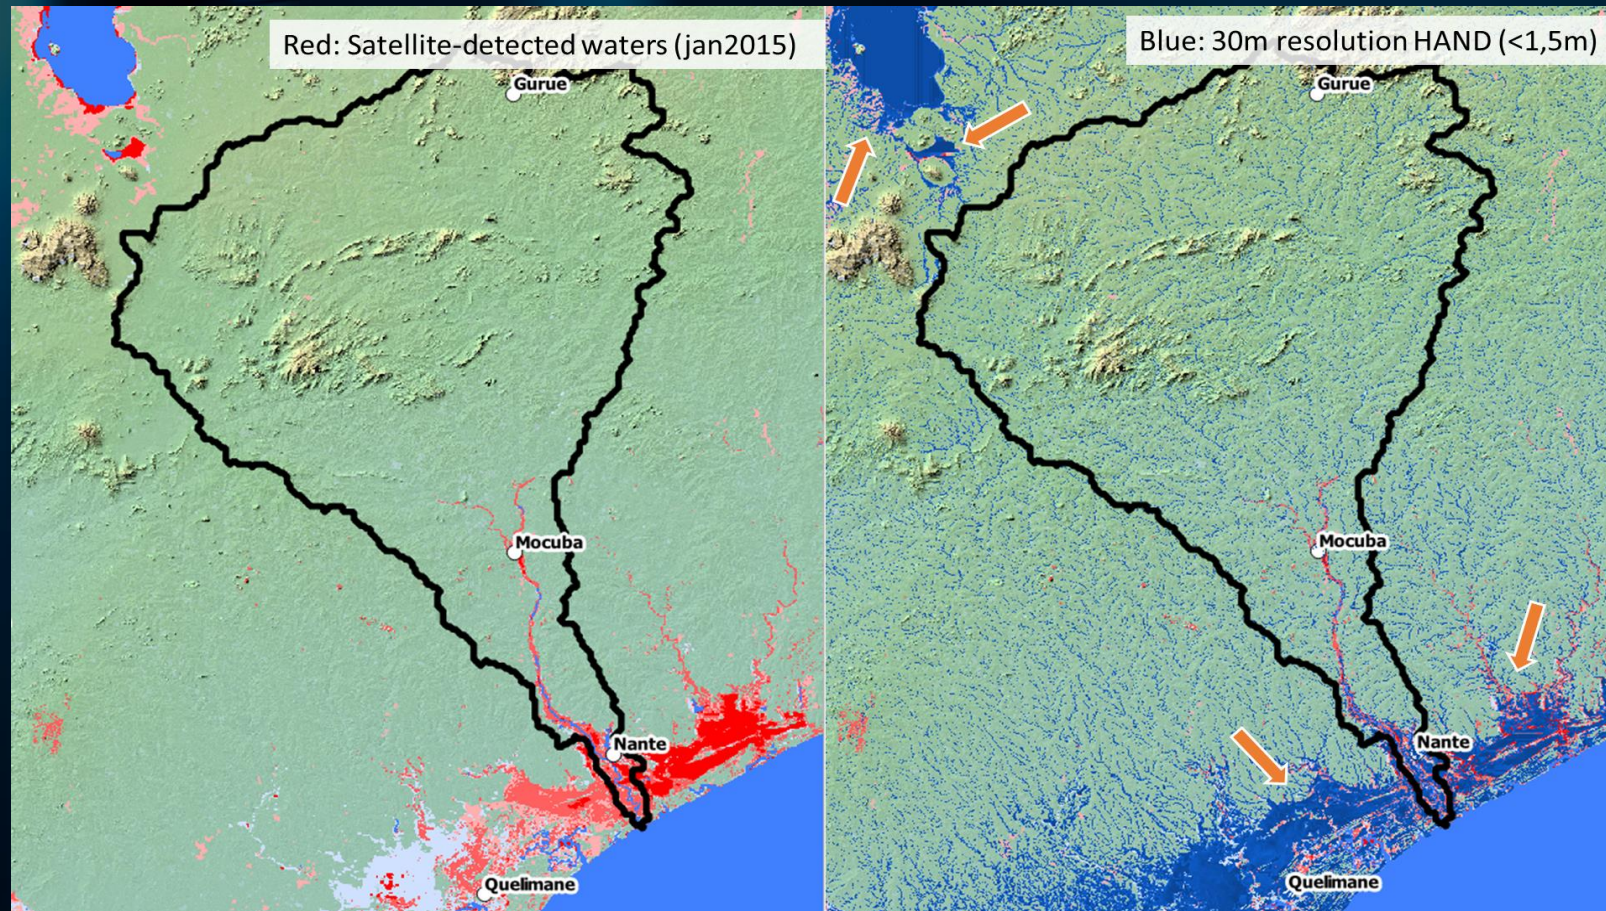

Dynamic hazard map: early warning

Data is available globally!

Multiple hazards:
Floods – Droughts – Landslides - Forest fires

No artefacts from artificial boundaries

Early action

Early action

Test cases for
Guatemala,
Madagascar,
Mozambique

Expand to global
scale

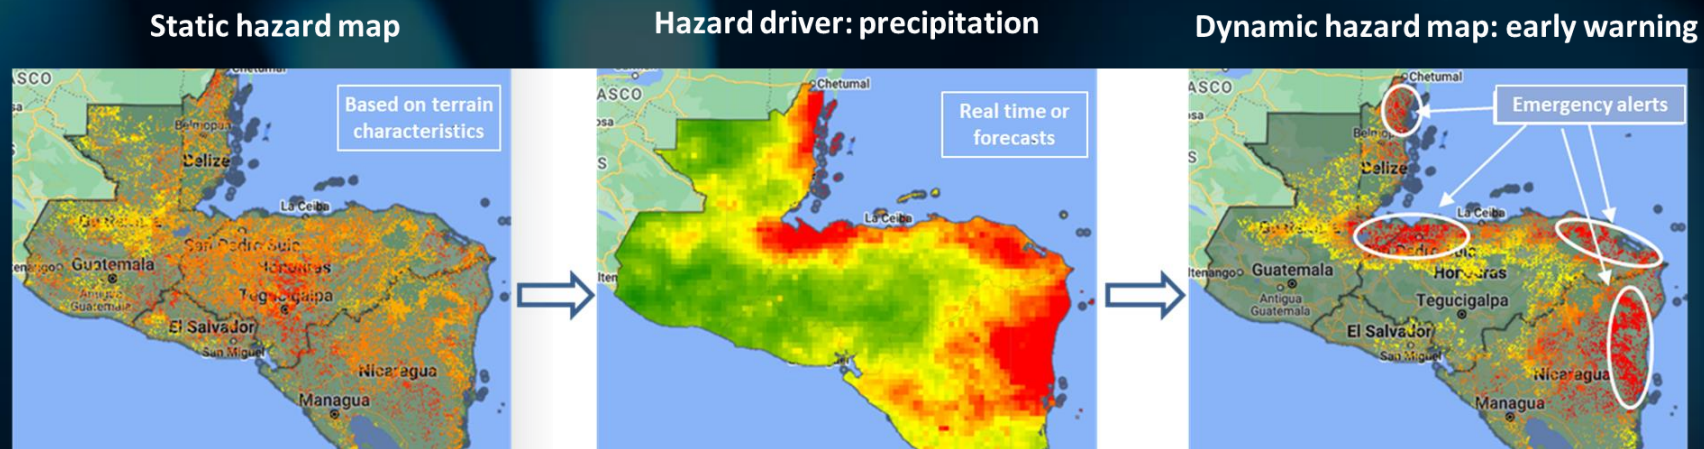

Include impacted
population and
assets

This is possible for
a fraction of the
pledged 3.1B\$

Rapid global hazard forecasting to support early action in data poor regions
