IAHS Digital Water Globe

A tool for networking knowledge in hydrology

Conveners

E. Mario Mendiondo

University of Sao Paulo
Brazil

Berit Arheimer

Swedish Meteorological &
Hydrological Institute - Sweden

Digital Water Globe

The Digital Water Globe platform is developed by the Swedish Meteorological and Hydrological Institute (SMHI), on behalf of IAHS.

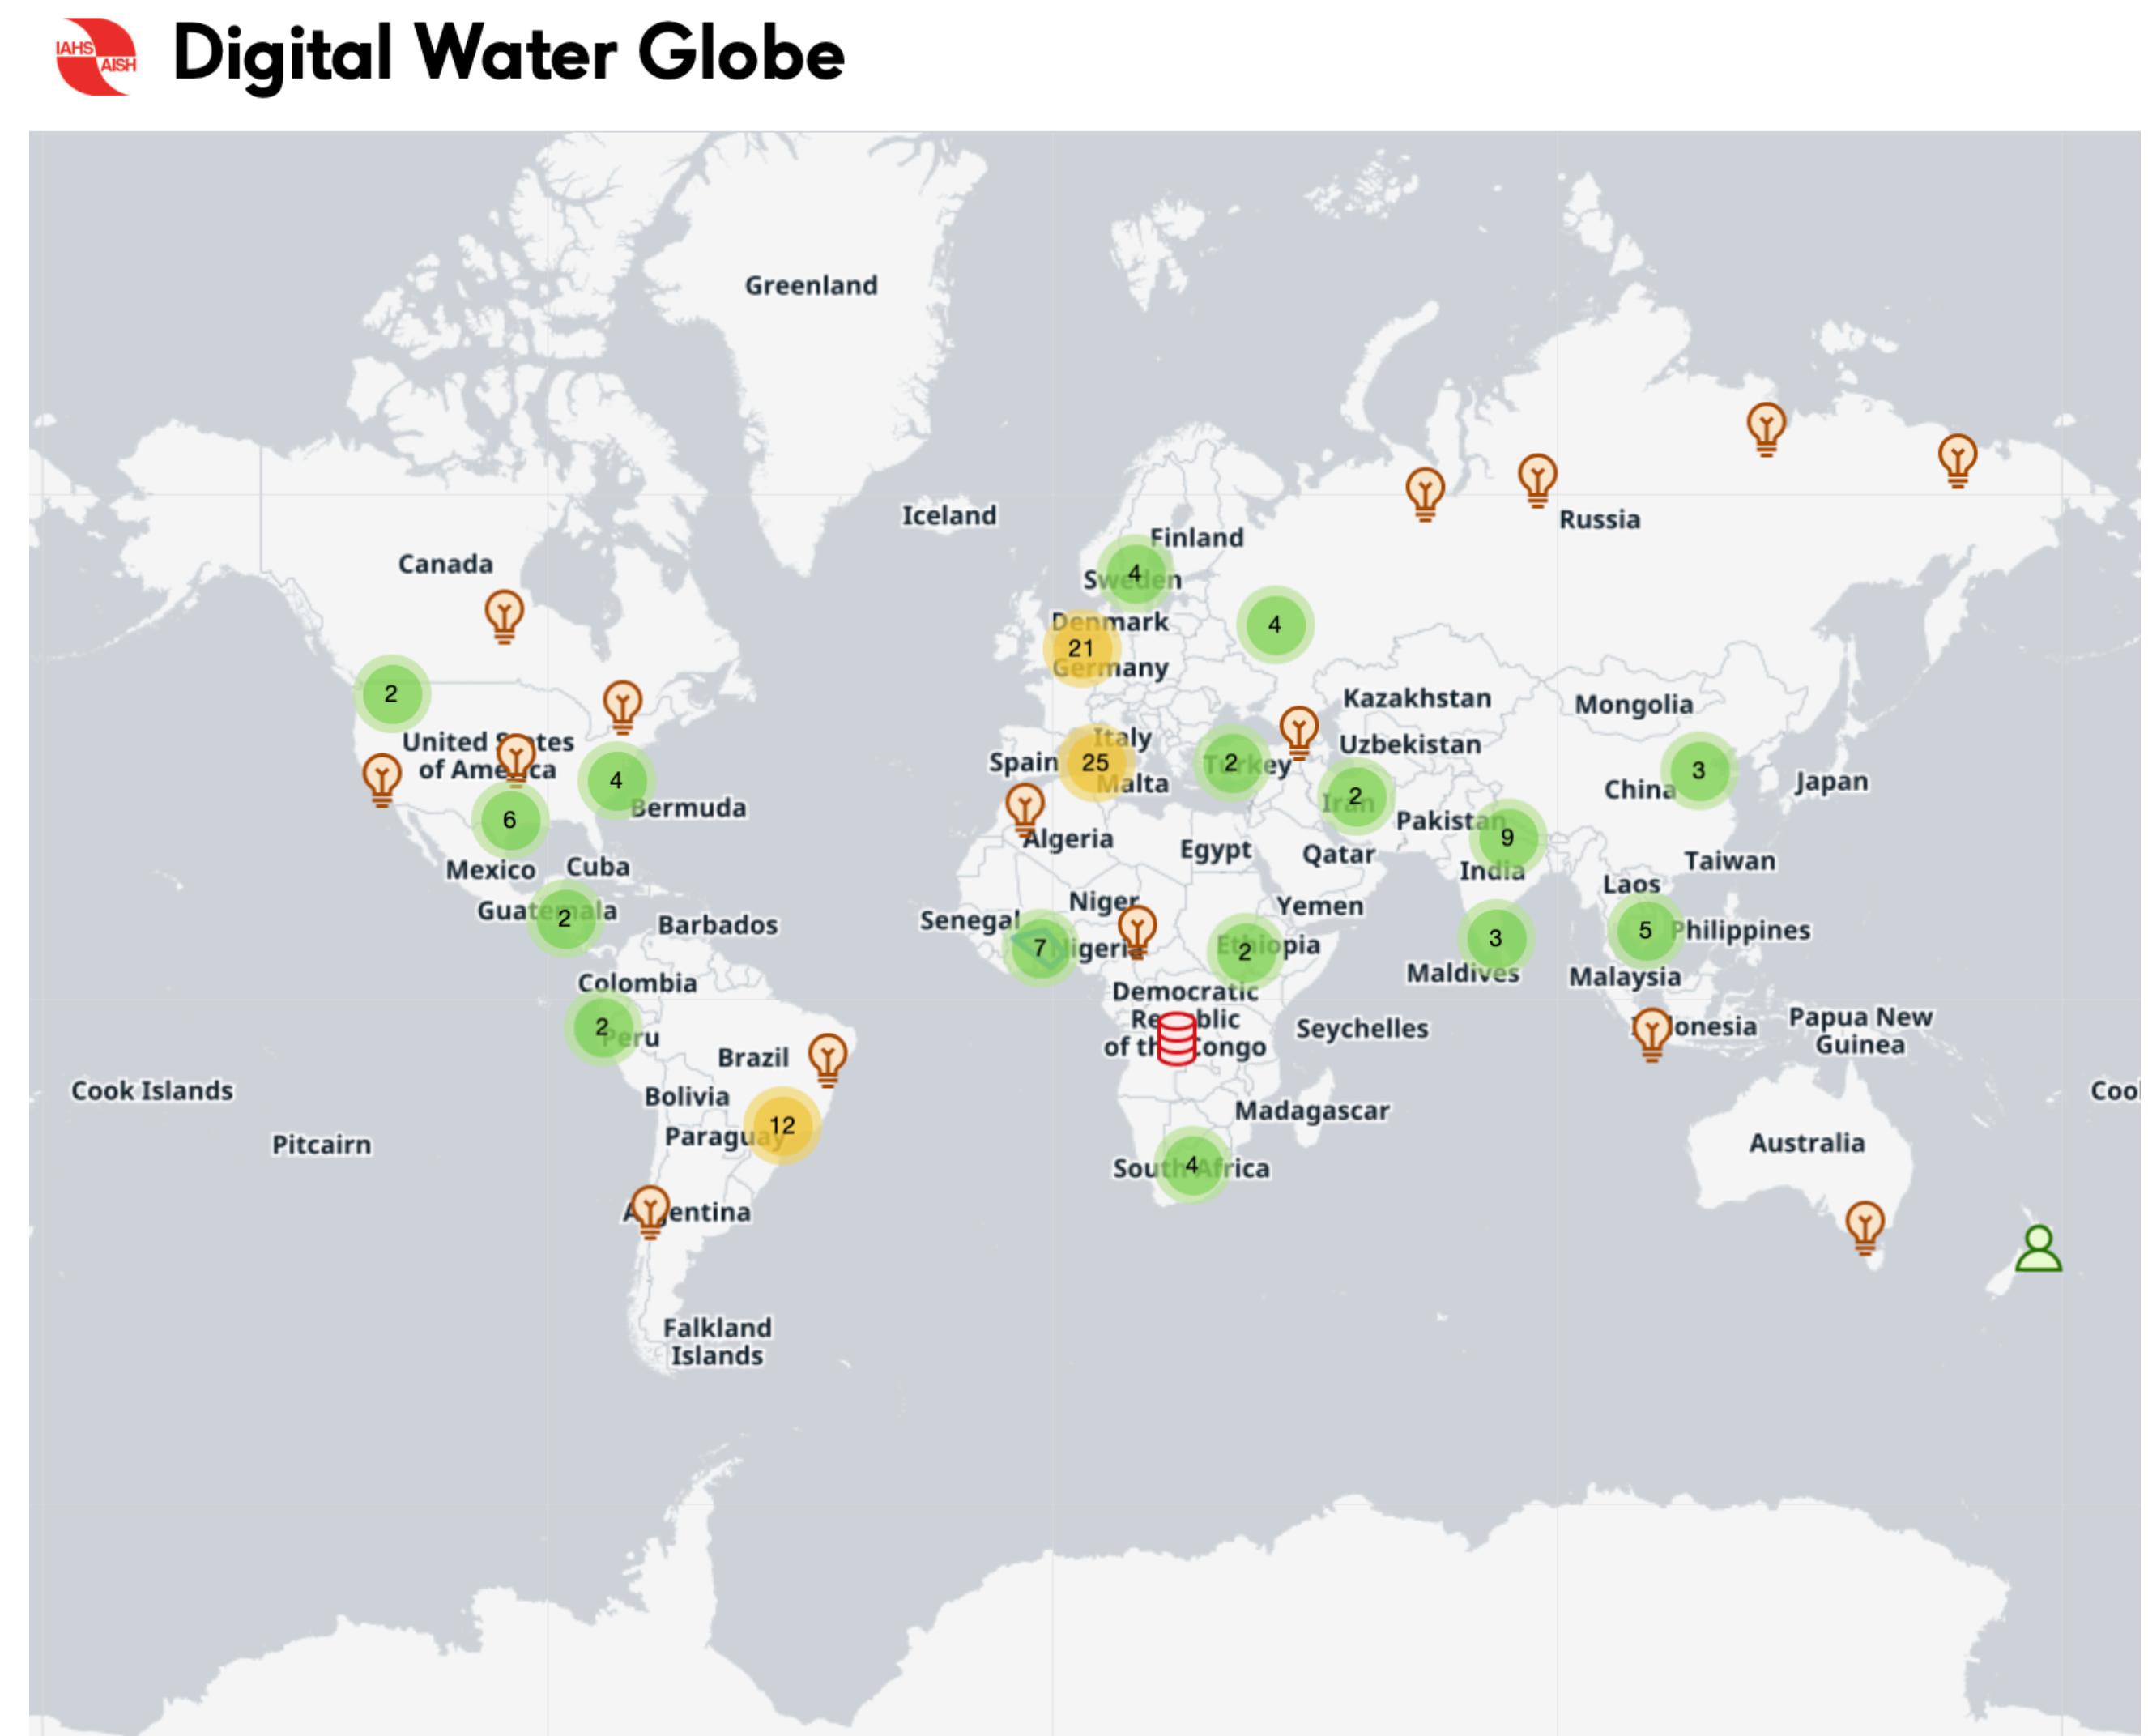

<https://dwg.smhi.se/dwg/>

The Digital Water Globe (DWG)

- The Digital Water Globe is an innovative tool specially designed for, and by, IAHS members.
- Here you can give visibility to (un)published results, research sites and find peers for collaborating around the world.
- The information is kept short and concise like a digital poster exhibition with key messages.
- Filter functions facilitate the search.

Background

- During the IAHS centenary in 2022
- Web platform and software system
- Link+display global hydrol. knowledge + scientific findings
- Facilitate new networking and knowledge management.
- DWG to stimulate and facilitate engagement, interactions, and dialogues between IAHS members (scientists, stakeholders, experts, practitioners, media, and citizens)
- Web visualisation and cutting-edge hydrological research from IAHS members.

IAHS Assembly, Montpellier, France, 2022
the 100-year anniversary with the end of
the Panta Rhei decade, envisaging
progress on the 23 UPHs - [Unsolved
Problems in Hydrology](#), developments of
[Open Science](#) and support to [Agenda
2030](#) in water-related fields.

Digital Water Globe

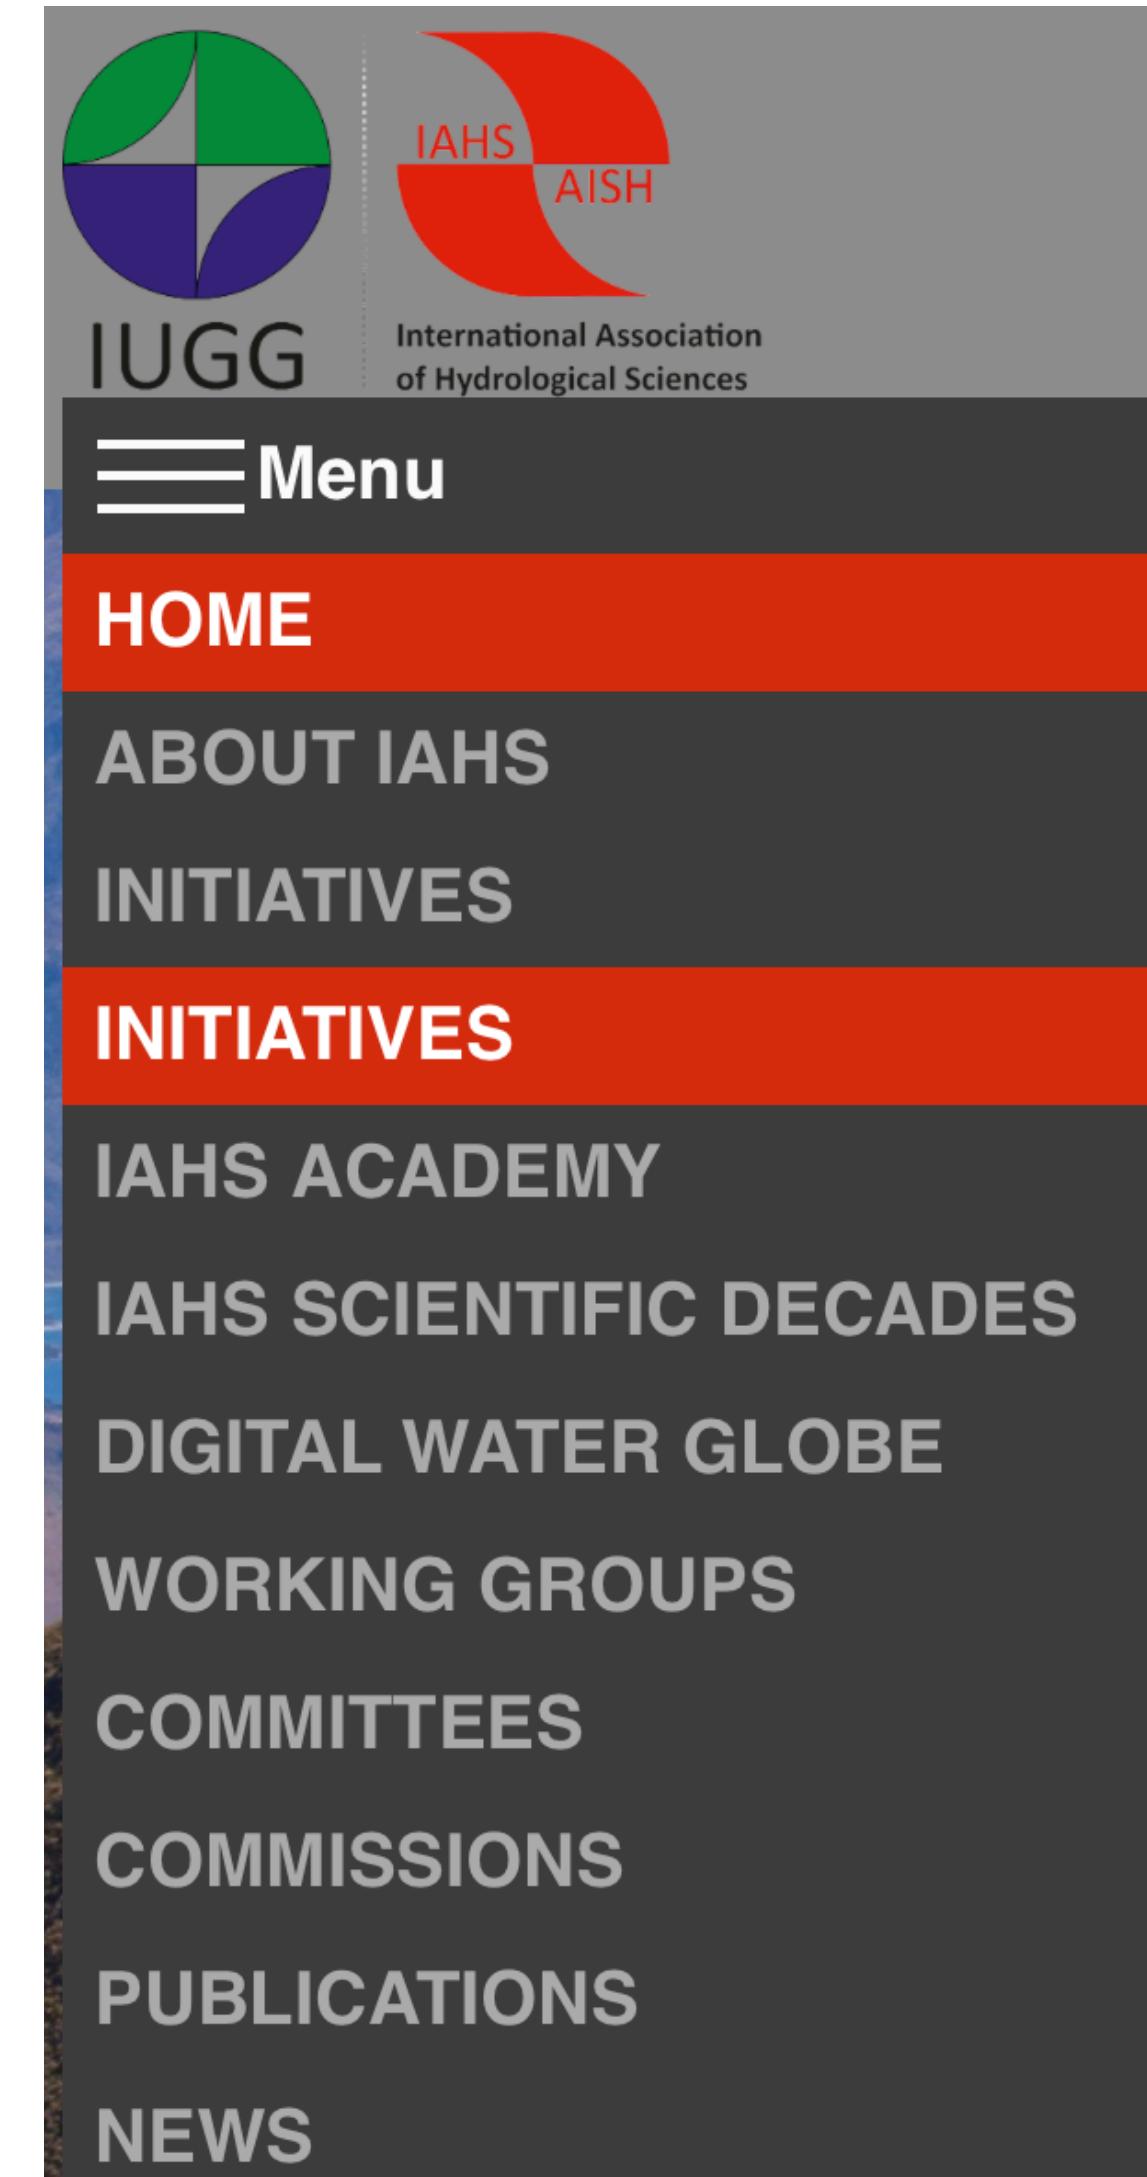

- Web-based software platform
- IAHS members share Case studies, Personal profiles, IAHS references and links to data repositories.
- Linked to a geographical position on a global map as well as keywords for quick search using filter functions.
- The DWG offers co-creation and re-examines the role of scientific outreach by exploring novel digital ways to interact between scientists and society for mutual understanding and co-evolution.

The digital platform enables

<https://iahs.info/>

- Graphic display of hydrological case studies from each continent, with community input.
- Overview of ongoing hydrological activities and scientific achievements.
- Opportunity for data sharing.
- Ability to link groups and foster scientific collaboration.
- Internal community building within and between IAHS Commissions and Working Groups.
- Engagement of and with partners, stakeholders, and citizens.
- Framework for displaying and linking projects involved in Panta Rhei, Unsolved Problems in Hydrology (UPH), and Science for solutions: Hydrology Engaging Local People IN one Global world (HELPING) initiatives.
- Evolution and innovation over time to provide an ongoing platform and archive.

IAHS DWG Associate Editors

**Luis Miguel
Castillo Rápalo,
University of
Sao Paulo,
