25/04/2025

1. Descriptive stats

VARIABLE	UNIT	DESCRIPTION
RESPONSE VARIABLE		
ΣEX (people at risk)	million persons	Sum of people analytically exposed per country to average between dengue and malaria, coastal floods, earthquakes with Modified Mercalli Intensity higher than 6, floods, tropical cyclone winds with Saffir-Simpson category higher than 1, tsunamis, drought based on 12-month standardized precipitation and evapotranspiration indices (SPI/SPEI), and conflict. Each subcategory is summed up regardless of possible overlap.
GLOBAL PREDICTORS		
SST_{global}	°C	Global average temperature of seawater near the surface.
$GSAT\Delta_{global}$	K	Change in global average near-surface air temperatures over land, oceans and sea ice above pre-industrial levels (1850-1900).
$SFCWIND_{global}$	m s ⁻¹	Global average near-surface wind speed. The magnitude of the two-dimensional horizontal air velocity near the surface.
PR_{global}	kg m ⁻² s ⁻¹	Global average of the sum of liquid and frozen water, comprising rain and snow, that falls to the Earth's surface. It is the sum of large-scale precipitation and convective precipitation. This parameter does not include fog, dew or the precipitation that evaporates in the atmosphere before it lands at the surface of the Earth. This variable represents the amount of water per unit area and time.

PRELIMINARY SUPPLEMENTARY DATA

COUNTRY LEVEL PREDICTORS		
<i>POP</i>	Million persons	Population of a given country.
<i>GDP</i>	Billion USD ₂₀₂₄	Gross Domestic Product at Purchasing Power Parity (PPP) with US dollar prices in 2024.
<i>HDI</i>	-	The Human Development Index is a summary measure of average achievement in key dimensions of human development: a long and healthy life, being knowledgeable and having a decent standard of living. The HDI is the geometric mean of normalized indices for each of the three dimensions.
<i>cdd</i>	Days	Maximum number of consecutive dry days. The maximum length of a dry spell, computed sequentially for the entire time series, then taking the maximum value during each month in the data period (a dry day is defined as any day in which the daily accumulated precipitation < 1 mm)
<i>cdw</i>	Days	Max Number of Consecutive Wet Days. This series measures the maximum length of a wet spell, computed sequentially for the entire time series, then taking the maximum value during each month in the data period (a wet day is defined as any day in which the daily accumulated precipitation ≥ 1 mm).
<i>hd40</i>	Days	The number of days with daily maximum temperature ≥ 40°C that occurred during the aggregation period
<i>pr</i>	mm	Aggregated accumulated precipitation.
<i>r20mm</i>	Days	The number of heavy precipitation days during the aggregation period. A heavy precipitation day for r20mm is defined as any day in which the daily accumulated precipitation is ≥ 20 mm.
<i>rx5day</i>	mm	The average highest precipitation amount over a consecutive 5-day period during each month in the data period.
<i>tas</i>	°C	Average mean temperature over the aggregation period.
<i>Net migration</i>	Thousand persons	The net total of migrants during the period, that is, the number of immigrants minus the number of emigrants, including citizens and noncitizens.
FINAL TARGET VARIABLES		
<i>PIN</i> (people in need)	million persons	The people in need of humanitarian assistance per country according to the United Nations Office for the Coordination of Humanitarian Affairs (UN OCHA).
<i>Funding requirement</i>	million USD _{nominal}	The funding required to provide humanitarian assistance to the people in need per country according to UN OCHA's analysis.
