X5.96 Bridging Automatic and Manual Pollen Monitoring: A Path Towards Homogenized Long-Term Time Series

Maria Lbadaoui-Darvas, Laura Sukiené,
José Oteros, Evgeny Kadantsev, Ingrida
Sauliené and Regula Gehrig

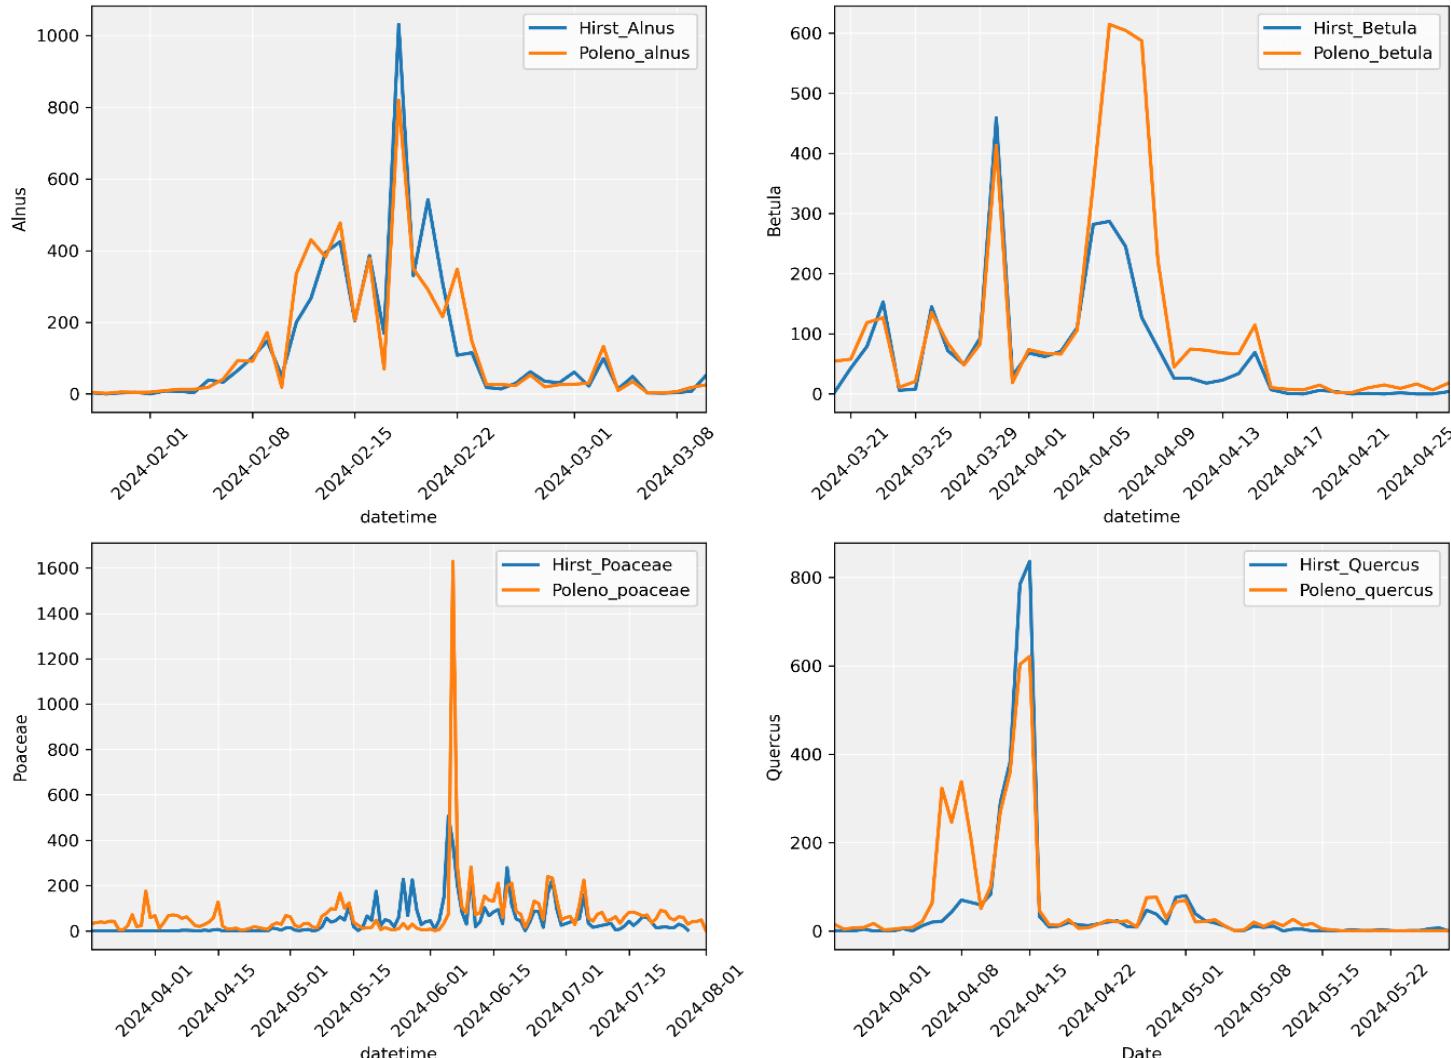

30.4.2025

Selected target taxa, seasons and algorithm

- Target taxa: **Alnus, Betula, Poaceae and Quercus**
 - Selection criteria for the target taxa:
 - Reliable poleno and hirst datasets
 - Relevant for all the regions in the project
 - Selection criteria for the season:
 - Lower threshold: earliest date at which the 2.5%SPI is reached for any station per country per taxon
 - Upper threshold: latest date at which 97.5%SPI is reached for any station per country per taxon
 - Modifications for alnus, poaceae
 - Selection criteria for the recognition algorithm:
 - Commonly available for each participant (MCH 2022 no supervisor)
 - Possibility to re-train the transfer operator on reanalysed data once a new model is ready

Basel - 2024

Features: meteorological data

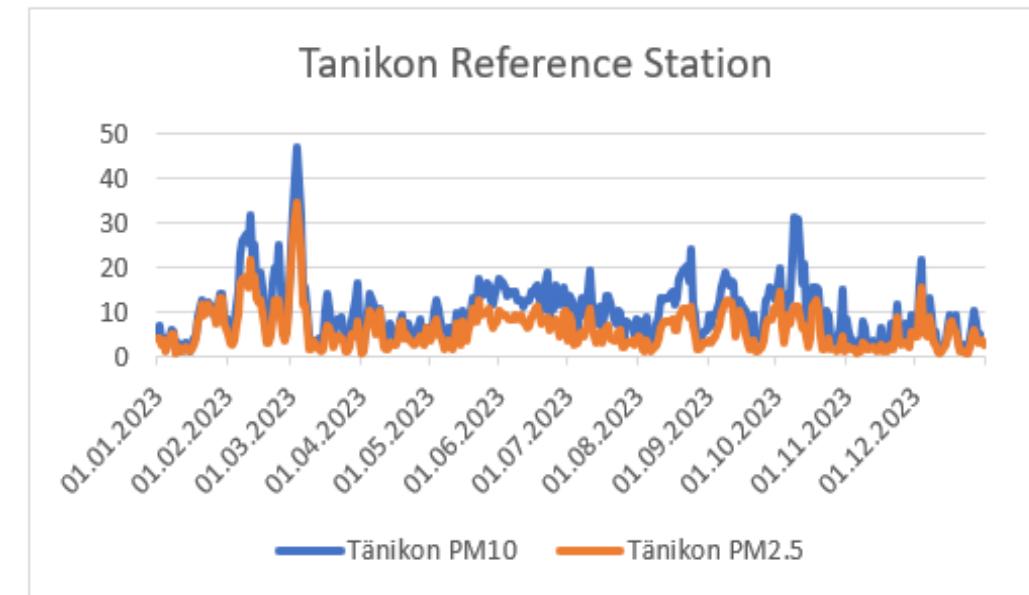

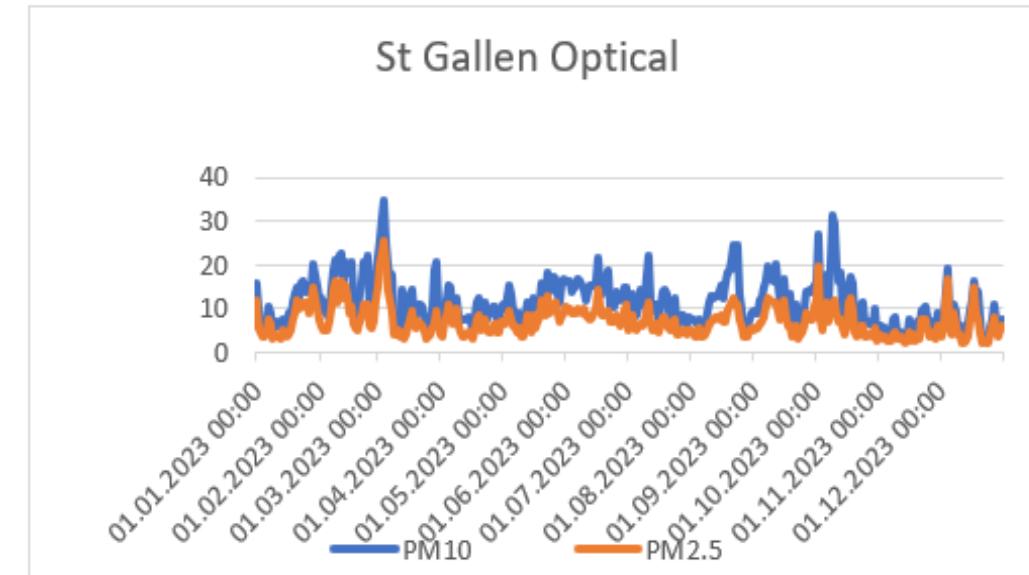

- **Daily data codes and variable names in datafile:**
 - Daily mean temperature (C): tre200d0 (mean_temp)
 - Daily minimum temperature: tre200dn (min_temp)
 - Daily maximum temperature: tre200dx (max_temp)
 - Daily sum precipitation (mm): rka150d0 (sum_prec)
 - Daily mean scalar wind speed (m/s): fkl010d0 (mean_wind_vel)
 - Daily max windspeed: fkl010d1 (max_wind_vel)
 - Daily mean wind direction: dkl010d0 (mean_wind_dir)
 - Daily mean RH (%): ure200d0 (mean_RH)
 - Daily minimum RH: ure200dh (min_RH)
 - Daily maximum RH: ure200dx (max_RH)
 - Daily duration of sunshine (min): sre00d0 (tot_sun)
 - Daily mean pressure at the station (): prestad0 (mean_pres)
- **Hourly data codes and variable names in the datafile:**
 - Hourly mean temperature (C): tre200h0 (hmean_temp)
 - Hourly sum precipitation (mm): rre150h0 (hsum_prec)
 - Hourly mean scalar wind speed (m/s): fkl010h0 (hmean_wind_vel)
 - Hourly max scalar windspeed: fkl010h1 (hmax_wind_vel)
 - Hourly mean wind direction: dkl010h0 (hmean_wind_dir)
 - Hourly mean RH (%): ure200h0 (hmean_RH)
 - Hourly duration of sunshine (min): sre00h0 (htot_sun)
 - Hourly mean pressure at the station (): prestah0 (hmean_pres)

6 maximum values
averaged to derive daily
aggregated values

Features: air pollution data

- PM data:
 - Daily data are used (hourly are not available for each station)
 - Data availability:
<https://www.bafu.admin.ch/bafu/en/home/topics/air/stat/e/data/data-query-nabel.html> (Basel, Lugano, Locarno, Payerne, Zurich),
<https://www.ostluft.ch/index.php?id=datenabfragen>
(St.Gallen/Buchs), Neuchatel, Luzern and Geneva are from cantonal resources (inluft)
- Sites with no reference data:
 - Use data from the closest reference monitor
 - Exception: large difference in land use or altitude, then local OPC data is preferred

Exploratory Data Analysis

30.4.2025

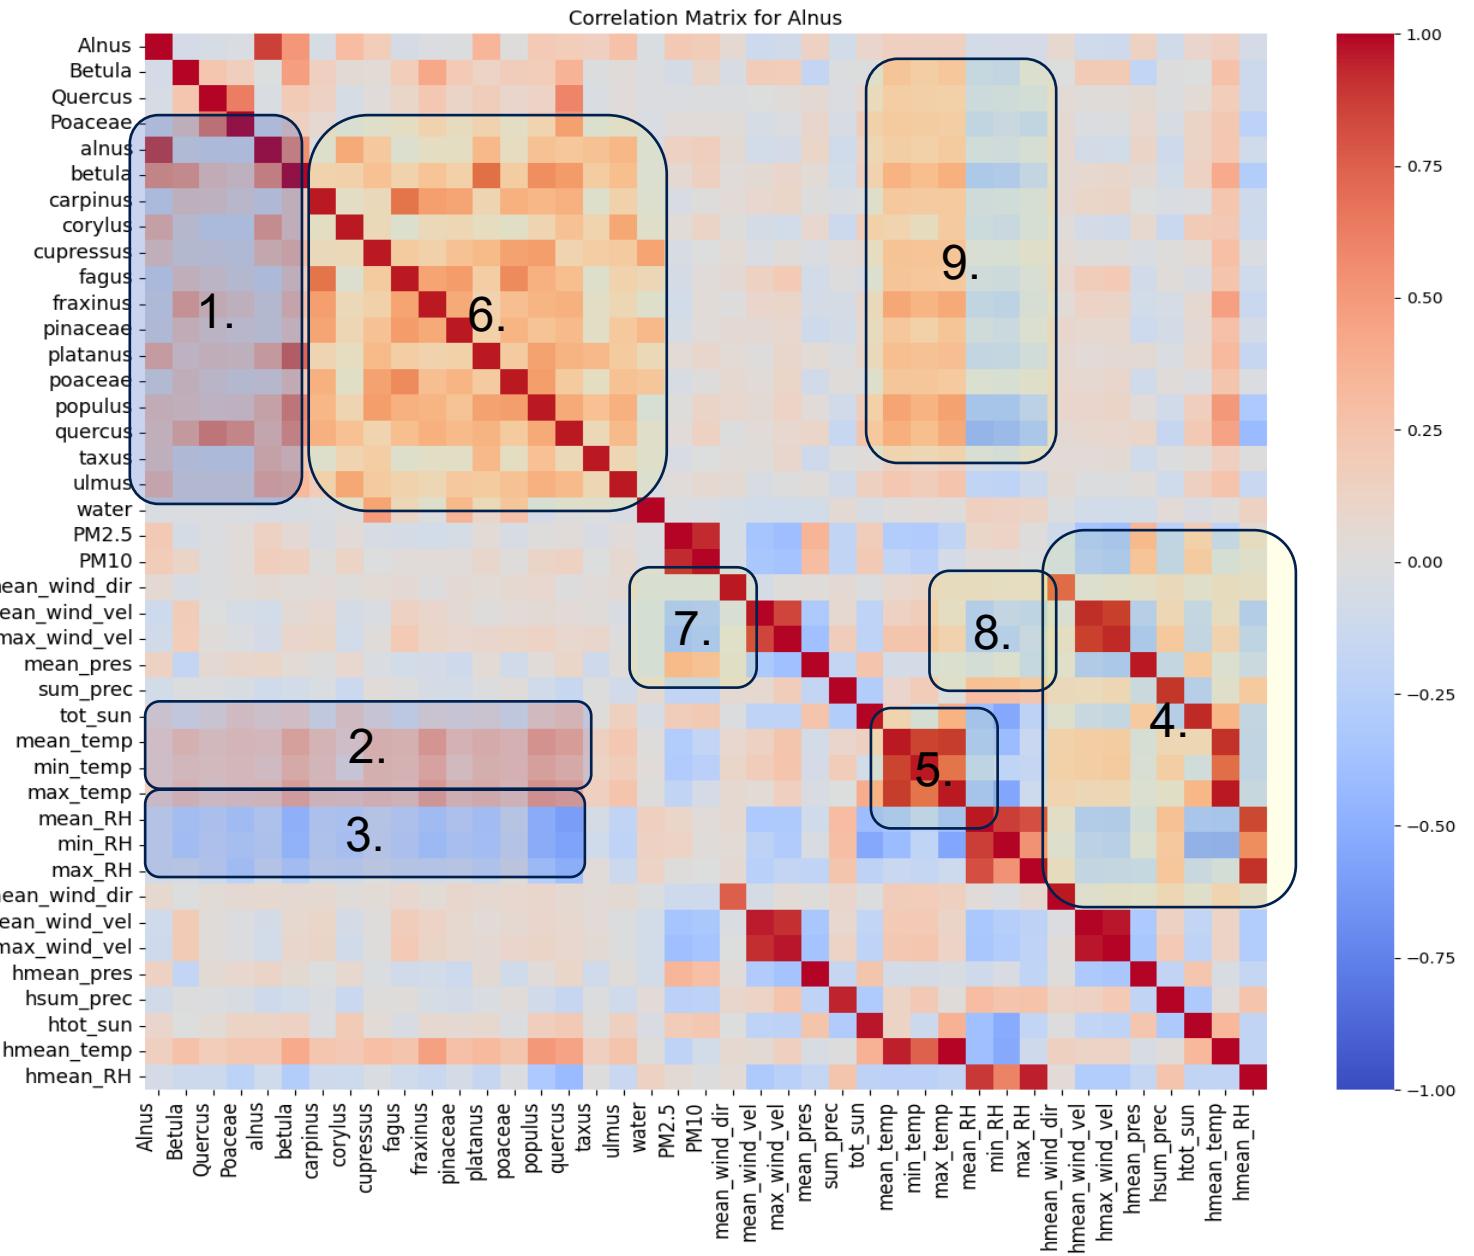

Pearson correlations

Linear correlations of the target taxa:

1. Poleno taxa
2. Temperature
3. Relative humidity

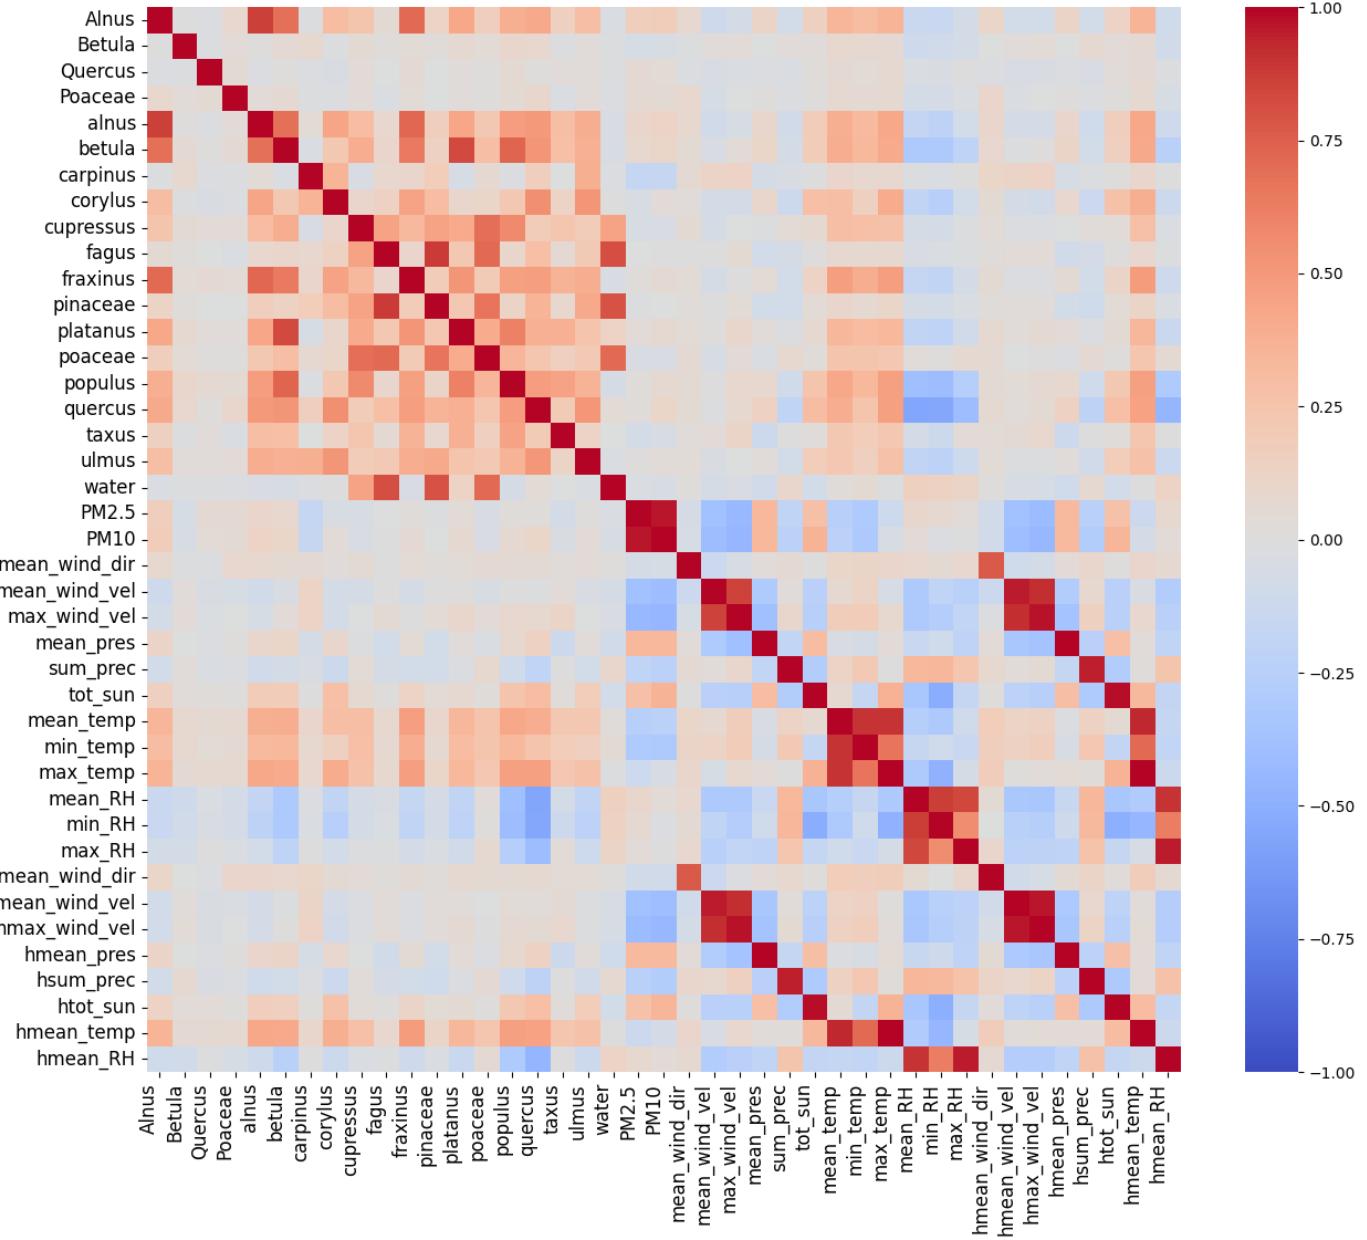

Interference between features:

4. Hourly and daily data
5. Temperature and humidity
6. Poleno taxa
7. Wind and PM
8. Wind and RH
9. Poleno taxa and temperature/RH

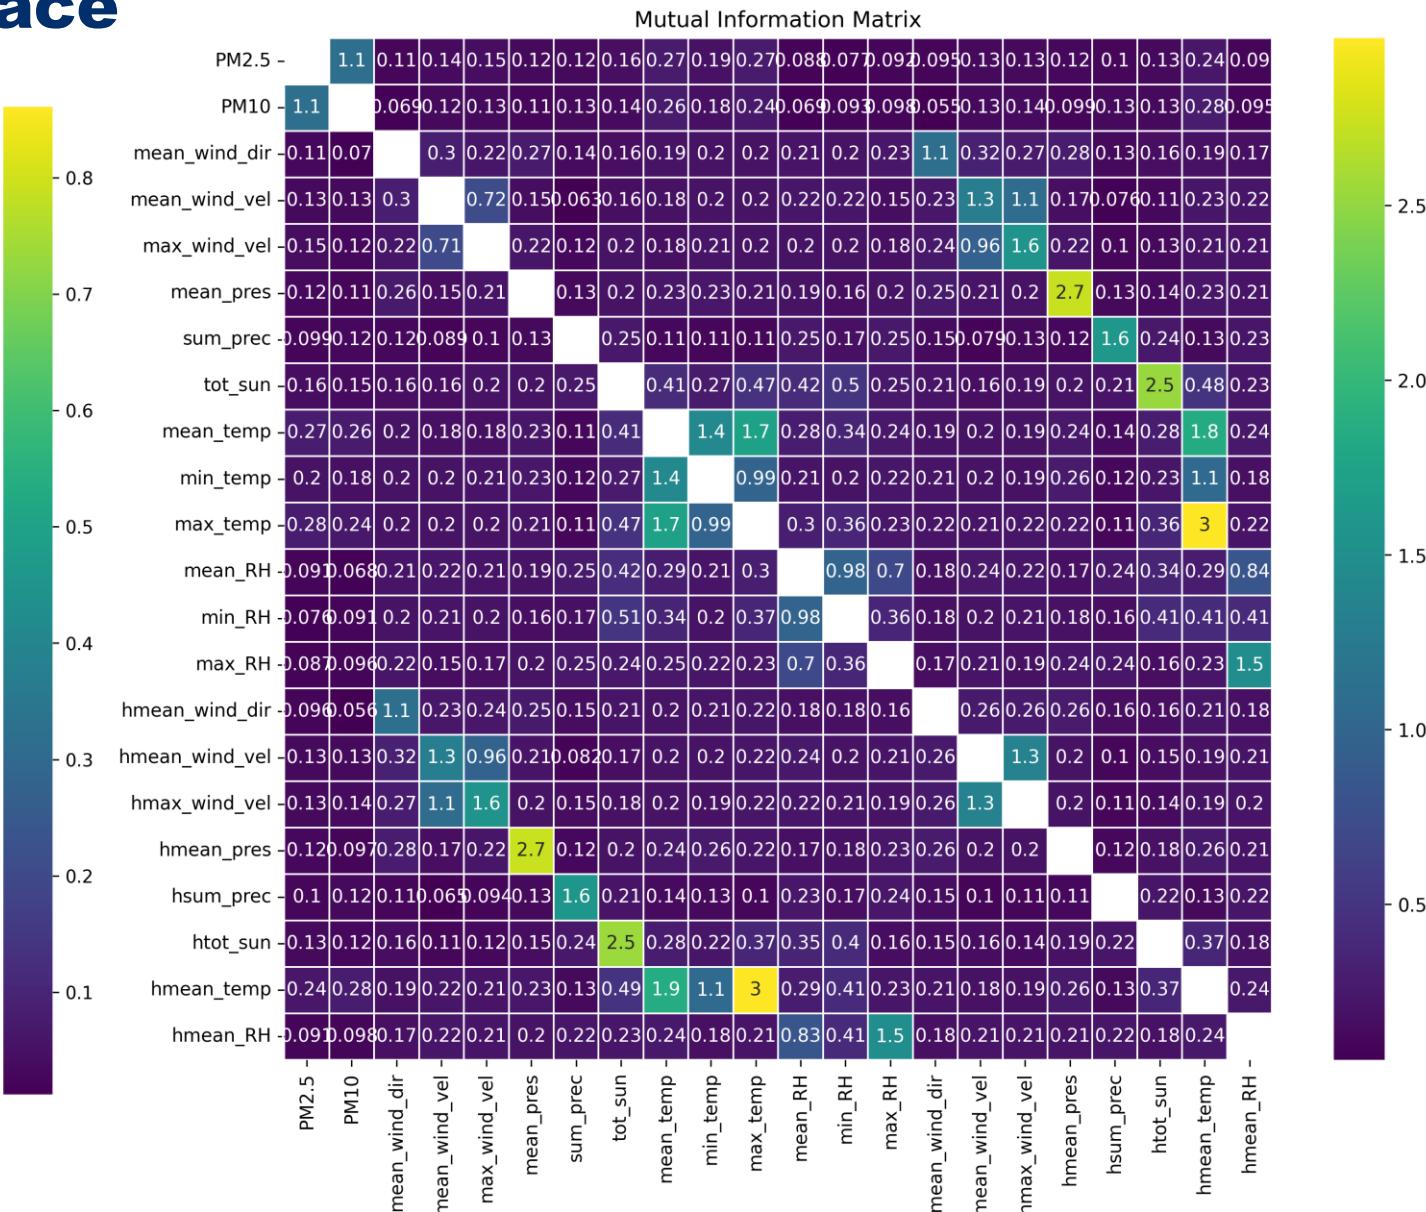

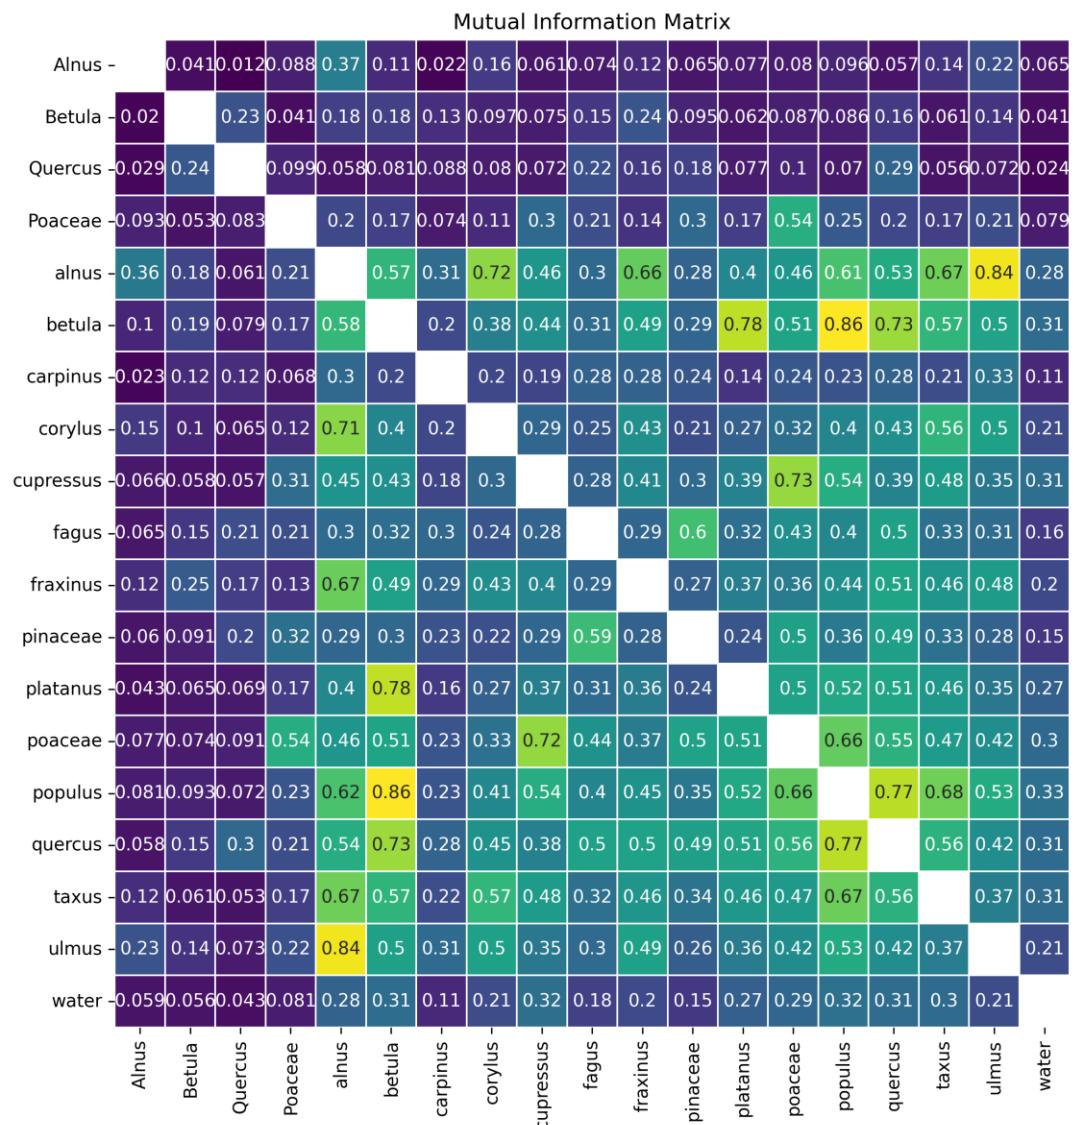

Spearman correlations

Qualitatively similar to
Pearson

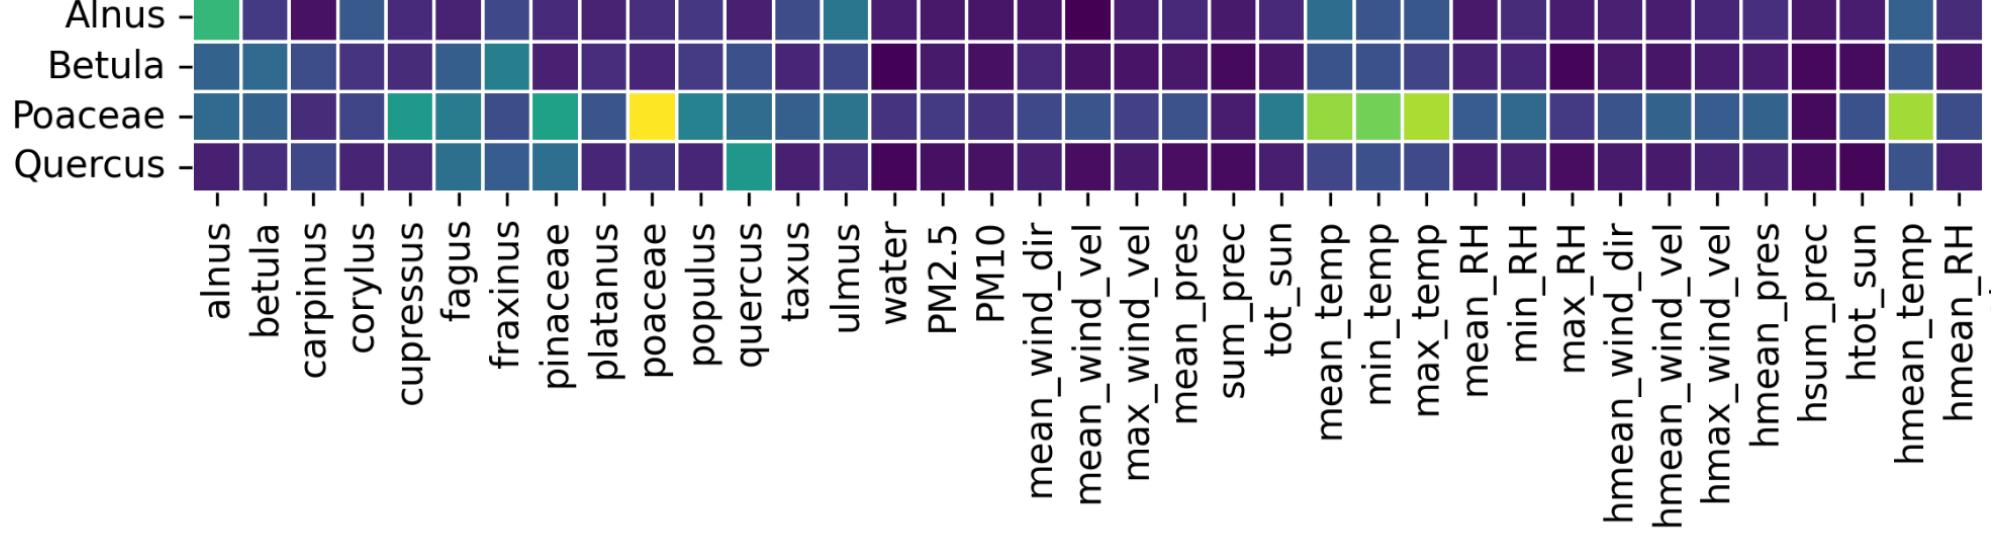

Mutual information: feature space

Funded by
the European Union

Mutual information: Target vs. feature

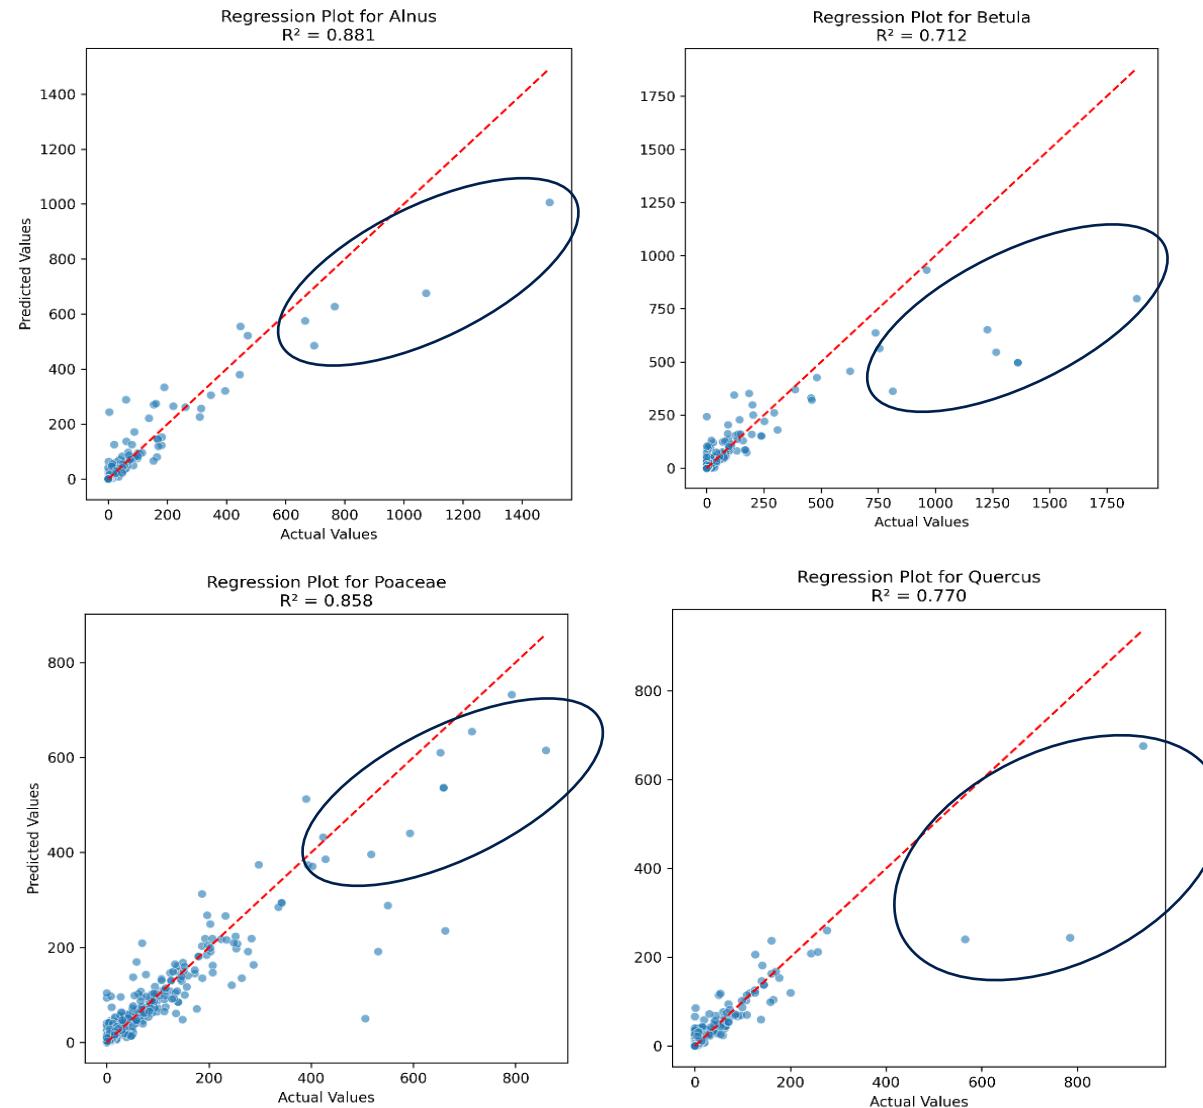

Alnus has the smallest MI scores with other pollen

Poaceae has the largest number of features with high MI scores

High MI scores can come from: correlation, misclassification, or temporal overlap

Random Forest regression plots without data augmentation

Circled areas show the underestimation of high manual pollen concentrations by the random forest regression without weighted data augmentation

Statistical metrics of the regression methods tested

Taxon	Model	Validation	R^2	RMSE
