Comparative verification in complex topography

Jonas Bhend, Vera Schönenberger, Jean-Christophe Orain,
Christoph Spirig, Lionel Moret, Mark Liniger

Objective

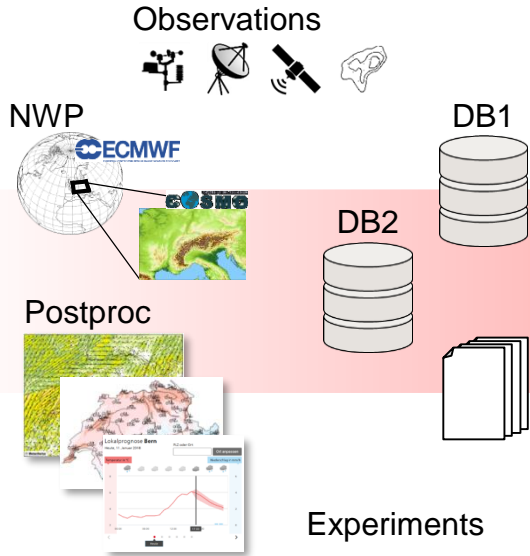

Provide data and tools to address a range of questions on performance of various automated forecast systems.

- Monitoring of forecast quality of most recent forecasts
- Case studies (meteograms of past forecasts with corresponding observations)
- In-depth analyses for development and usage of automated forecasts

Various options to filter tables with 'worst' forecasts that allow to diagnose

- observation errors
- systematic issues with forecasts

* Forecast with highest CRPS per parameter, source, and station

Innovations – forecast issue time

- Forecasts are verified at specific (user-defined) times
- At issue time, the newest available forecast (from a given source) is used

Example: forecast issued at 6 UTC uses

- COSMO-1E from 3 UTC
- COSMO-2E from 6 UTC
- ECMWF IFS from 12 UTC the day before (for the forecast out to +15d)
- Postprocessing (with above combination)

* e.g. availability of full NWP run

Innovations – matrix selection

- User is free to select which scores from which forecast sources to compare*

		n	ctl_ME	ctl_MAE	ctl_MSE	ctl_SE2	obs	mn_ME	mn_MAE	mn_MSE	mn_SE2	med_ME	med_MAE	med_MSE	med_SE2	mn	std	CRPS
deterministic	→	COSMO-1	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>											
ensemble	→	COSMO-E	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
probabilistic (no members)	→	COSMO-E-gEMOS	<input type="checkbox"/>					<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

* and yes, there are a lot of meaningless comparisons that are technically possible

Innovations – matrix selection

Use case: several sources, one score

Use case: benefit of probabilistic forecasts

		n	ctl_ME	ctl_MAE	ctl_MSE	ctl_SE2	obs	mn_ME	mn_MAE	mn_MSE	mn_SE2	med_ME	med_MAE	med_MSE	med_SE2	mn	std	CRPS
