Relatable simulations in **Near Real-Time**

The screenshot shows the website climate-storylines.awi.de. The page title is "AWI Climate Storylines". Navigation links include Home, About, Data Explorer, and Impressum. A secondary navigation bar includes How to cite, Absolute-value maps, Difference maps, Anomaly maps, and Regional-mean time series. The main content area displays a "Storyline Simulation, Present-day climate: 11/05/2025 – 17/05/2025" for "Europe". A map of Europe shows sea surface temperature anomalies with a color scale from -3 to 3 degrees Celsius. The map shows significant warming (red/orange) in the North Atlantic and Mediterranean, and cooling (blue) in the Baltic Sea. A vertical color scale on the right is labeled "Sea Surface Temperature Anomaly (°C)". On the left, there are controls for Dataset (Storyline Simulations), Anomaly of (Storyline Simulations), Climate Conditions (Present-day conditions selected), Time Period (2025-05-11 to 2025-05-17), Variable (Sea Surface Temperature), and Region (Show statistics).
